

Ensure accurate trap-counts are taken at the trap

Agrian Trap Counting part of Agrian Mobile enables trap counters to keep records up-to-date, generate reports, analyze pest management strategies, map fields and improve IPM practices.

How It Works

- Traps are deployed with the Agrian Mobile device and a GIS position is established
- Subsequent trap counts throughout the season must be taken at the GPS location of the trap, ensuring that trap counts are taken at the correct trap
- All of the collected information will be automatically fed into the Agrian Online Trap Counting Management Tool

Components

- Agrian Online Trap-Counting Management Tool
 - Used to manage trap-counting process and analyze trap-counting results
- Agrian Handheld Trap-Counting Account
 - PDA based software that is used to capture and transfer field data to the online account. Multiple Agrian Handheld Trap-Counting accounts can be tied into one Agrian Online Trap-counting Management Tool

Pricing

- **Agrian Documented Advisor Account Holders.**
 - Agrian Online Trap-counting Management Tool: *Included in all Documented accounts*
