GENERAL INFORMATION

CROSSHAIR™ is specially formulated for use with most herbicides, insecticides and fungicides that are labeled for use in agriculture, forestry, roadside, industrial, non-crop, turf, golf course and ornamentals. CROSSHAIR is a deposition and drift management agent that reduces the number of spray droplet fines < 100 microns and increases the VMD (Volume Median Diameter) of the spray droplets. CROSSHAIR generates a more uniform droplet size spectrum which results in enhanced deposition and coverage of the spray on the targeted surface.

Note: CROSSHAIR does not replace the need for additional adjuvants/surfactants in the spray tank.

DIRECTIONS FOR USE

Use 4 fluid ounces of CROSSHAIR per acre.

CROSSHAIR must be added to the spray tank last.

When water conditioning products are used, always add the water conditioning product as the first product in the spray mixture.

Add any additional adjuvants to the spray tank before CROSSHAIR.

CROSSHAIR is compatible with phenoxy herbicides and dicamba formulations, but does not provide significant drift reduction.

CROSSHAIR is compatible with pyridine chemistries, but may not provide significant drift reduction.

CROSSHAIR provides drift reduction when used with paraquat formulations.

Proper nozzle selection and operation (pressure and spray angle) combined with good operator evaluation and decision making on wind direction, temperature inversions, application speed and susceptible crops in the area combined with CROSSHAIR are necessary for maximum drift reduction potential.

For Aquatic Use: (Except in Washington) CROSSHAIR can be used with labeled aquatic products. Do not exceed 1 quart of CROSSHAIR per surface acre of water.
STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.
