For the control of certain diseases in various crops caused by the Oomycete class of fungi

**ACTIVE INGREDIENT:**
Metalaxyl: \(N-(2,6\text{-dimethylphenyl})-N-(\text{methoxyacetyl})\) alanine methyl ester .......................... 23.0%

**INERT INGREDIENTS:** ........................................... 77.0%

**TOTAL:** .............................................................. 100.0%

Contains 2 lbs. active ingredient per gallon.

**KEEP OUT OF REACH OF CHILDREN**

**WARNING - AVISO**

PRECAUCION AL USUARIO: Si usted no lee ingles, no use este producto hasta que la etiqueta haya sido explicado ampliamente.

See additional precautionary statements and directions for use inside booklet.

EPA Reg. No. 71532-5-66330

For Product Use Information Call: 1-866-761-9397

Product of South Korea.
Formulated in the United States

**FIRST AID**

**IF IN EYES:** Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

**IF SWALLOWED:** Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.

**IF ON SKIN OR CLOTHING:** Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

**IF INHALED:** Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

**NOTE TO PHYSICIAN:** Consideration should be given to gastric lavage with an endotracheal tube in place. A slurry of activated charcoal in water may be left in stomach. Give a saline laxative followed by symptomatic and supportive care.

**EMERGENCY TELEPHONE NUMBERS:** You may contact:
FOR 24-HOUR EMERGENCY MEDICAL ASSISTANCE CALL: Call PROSAR at 1-866-303-6952.
FOR CHEMICAL EMERGENCY: Spill, leak, fire, exposure, or accident, call CHEMTREC 1-800-424-9300.
PRECAUTIONARY STATEMENTS
Hazards to Humans and Domestic Animals

WARNING/AVISOS
Causes substantial but temporary eye injury. Harmful if swallowed, absorbed through the skin or if inhaled. Do not get in eyes or on clothing. Avoid contact with skin. Avoid breathing vapors or spray mist. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco. Remove and wash contaminated clothing before reuse.

Personal Protective Equipment (PPE)
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves such as barrier laminate or viton
• Shoes plus socks
• Protective eyewear such as goggles, face shield or safety glasses.
Follow manufacturer's instructions for cleaning/maintaining PPE. If not such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Control Statements
When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations

Environmental Hazards
Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Apply only as specified on this label. Do not apply when weather conditions favor drift from treated areas. Do not contaminate water when disposing of equipment washwaters or rinsate.

Groundwater Advisory Statement
This chemical is known to leach through soil into ground water under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground water contamination.

Physical or Chemical Hazards

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

Pesticide Storage: Store at temperatures above 40°F. Crystals may form at lower storage temperatures. If this occurs, place the product in a warm room (88°F or above) and roll or shake the container at frequent intervals until all crystals are dissolved.

For minor spills, leaks, etc. follow all precautions indicated on this label and clean-up immediately. Take special care to avoid contamination of equipment and facilities during clean-up procedures and disposal of wastes.

Pesticide Disposal: Wastes resulting from the use of this product are toxic. Improper disposal of unused pesticide spray mixture, or rinsate is a violation of Federal law. Pesticide, spray mixture or rinsate that cannot be used according to label instructions must be disposed of according to Federal, State or local procedures. For guidance in proper disposal methods, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional office.

Container Disposal: Do not reuse empty container. Triple rinse (or equivalent) and offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Returnable/Refillable Containers: Do not rinse container. Do not empty remaining formulated product. Do not break seals. Return intact to point of purchase.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.
MetaStar 2E AG is a systemic fungicide for use on selected crops to control certain diseases caused by members of the Oomycete class of fungi. It is usually compatible with Balan, Bravo, Di-Syston, Dithane M-22, Dithane M-45, Nemacur, D.z.n., Furadan, Lorsban, Manzate, Manzate 200, Mocap, Mocap Plus 4-2EC, Terraclor 2E, Terraclor 75W and Tillam. Other fungicides must be used to control diseases incited by other classes of fungi.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 48 hours. Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

Failure to follow the directions for use and precautions on this label may result in crop injury, poor disease control, or illegal residues.

Failure to follow the directions for use and precautions on this label may result in crop injury, poor disease control, or illegal residues.

Agricultural Use Requirements

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 48 hours. Exception: If the product is soil-injected or soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:
- Coveralls
- Chemical resistant gloves made of any waterproof material.
- Shoes plus socks
- Protective eyewear such as goggles, face shield or safety glasses.

Non-Agricultural Use Requirements

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

Do not enter or allow others or pets to enter the treated area until sprays have dried.

General Information

MetaStar 2E AG is a systemic fungicide for use on selected crops to control certain diseases caused by members of the Oomycete class of fungi. Other fungicides must be used to control diseases incited by other classes of fungi.

This product is not to be used in foliar applications unless specified on this label or in solutions used to dip plants.

Resistance Management: MetaStar 2E AG is a systemic fungicide having a specific mode of action and could be subject to development of insensitive strains of fungi. Development of insensitivity cannot be predicted. Therefore Arysta cannot assume liability for crop damage resulting from insensitive strains of fungi. If treatment is not effective following the use of MetaStar 2E AG as recommended, an insensitive strain of fungi may be present. If the treatment is ineffective due to the presence of a MetaStar 2E AG insensitive strain of fungi, neither MetaStar 2E AG nor any other fungicide with similar action will effectively control that disease. Consideration should then be given to the prompt use of other types of suitable fungicides. Consult with your State Agricultural Experiment Station or Extension Service Specialist for guidance on your particular crop and disease control situation.

Do not make foliar applications to field grown tobacco or other crops unless specified, since this practice may encourage more rapid development of insensitivity.

This label is for field use only and is not intended for use on transplant trays, greenhouses, lath houses, float houses, hydroponic production, or in bedding plant structures.

To avoid spray drift, do not apply under windy conditions. Avoid spray overlap, as crop injury may result.

Where rate ranges are specified on this label, use the higher rate when heavy disease pressure is expected and the lower rate when disease pressure is expected to be light unless otherwise noted.

Attention: Under conditions conducive to extended infection periods, additional fungicide applications beyond the number allowed by this label may be needed. Under these conditions, use another fungicide registered for the crop/disease appearing on this label.

Conditions conducive to extension of infection periods include: (1) a cool and wet environment for Pythium seeding disease, (2) long growing seasons, (3) a cool and humid environment for downy mildew and (4) use of susceptible varieties.

Mixing Instructions

Add ¼ - ⅙ of the required amount of water to the spray tank, add the proper amount of MetaStar 2E AG then add the rest of the water. When tank mixing other products with MetaStar 2E AG, follow the proper sequence of adding products to the spray tank. Wettable powders or water dispersible granules should be added to the water in the tank first, followed by flowable products, with emulsifiable concentrates, such a MetaStar 2E AG, added last. Provide sufficient agitation during mixing and application to maintain a uniform emulsion.

MetaStar 2E AG is usually compatible with Balan, Bravo, Di-Syston, Dithane M-22, Dithane M-45, Nemacur, D.z.n., Furadan, Lorsban, Manzate, Manzate 200, Mocap, Mocap Plus 4-2EC, Terraclor 2E, Terraclor 75W and Tillam.

To assure the compatibility of MetaStar 2E AG with these and other products, pour the products into a small container of water in the correct proportions. After thorough mixing, let stand for five minutes. If the combination remains mixed, or can be remixed readily, the mixture is compatible.
BEFORE TANK MIXING MetaStar 2E AG WITH OTHER REGISTERED PRODUCTS FOR ANY USE ON THIS LABEL, READ THE LABEL OF THE TANK MIX PARTNER TO BE CERTAIN IT IS LABELED FOR USE ON THE PARTICULAR CROP AND THAT USE PATTERNS ARE COMPATIBLE WITH THOSE OF MetaStar 2E AG.

Application Instructions
Apply MetaStar 2E AG by ground or air in sufficient water or liquid fertilizer to provide uniform coverage of the soil surface. Apply in a minimum of 20 gals. per acre for ground applications and 5 gals. per acre by air. Refer to the specific crop directions for use for application recommendations.

For banded applications, the area actually is the area covered by the band, not total cropland area planted. Some row-crop recommendations are based on treating in-the-row and these rates generally are specified as amounts (fl. oz.) of product per certain row length (often 1,000 ft.). Others express rates as amount per treated acre which means the total area treated with the pesticide. If rates are expressed as amount per treated acre and banded applications are used, the amount of pesticide used per acre will be proportionately less. The following formula can be used to calculate the amount of MetaStar 2E AG needed per acre of crop when banded applications are made.

Calculate the amount of MetaStar 2E AG needed for band treatment by the formula:

\[
\text{amount needed}\ = \ \frac{\text{band width in inches} \times \text{per acre}}{\text{row spacing in inches}} \times \text{broadcast rate} \times \text{per acre of field}
\]

Application Through Irrigation Systems
MetaStar 2E AG alone or in combination with other pesticides which are registered for application through irrigation systems, may be applied through irrigation systems. Apply this product only through center pivot, solid set, hand move, moving wheel, micro-sprinkler or drip irrigation systems. Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts. Do not connect irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety device for the public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Operating Instructions
1. The system must contain a functional check valve, vacuum relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.
2. The pesticide injection pipeline must contain a functional, automatic, quick-closing valve to prevent the flow of fluid back toward the injection pump.
3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
6. Systems must use a metering pump, such as a positive displacement injection pump (e.g. diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
7. Do not apply when wind speed favors drift beyond the area intended.

Application Instructions
MetaStar 2E AG must be applied on the schedule specified in the specific crop use recommendations, not according to the irrigation schedule. With the exception of avocados and citrus, MetaStar 2E AG has not been sufficiently tested when applied through irrigation systems to assure consistent product performance for all labeled uses. The following calibration and application techniques are provided for user reference, but do not constitute a warranty of fitness for application through sprinkler or drip irrigation equipment. Users must check the state and local regulatory agencies for potential use restrictions before applying any agricultural chemical through sprinkler or drip irrigation equipment.

NOTE: Do not inject MetaStar 2E AG at full strength or deterioration of valves and seals may occur. Use a dilution ratio of at least 10 parts water to 1 part MetaStar 2E AG in the mix tank. MetaStar 2E AG is corrosive to many seal materials. Leather seals are best. EPDM or silicone rubber seals can be used but should be replaced once a year. Do not use Viton, Buna-N, Neoprene or PVC seals.

Center Pivot Irrigation Equipment
NOTE: (1) Use only with drive systems which provide uniform water distribution. (2) Do not use end guns when chemigating MetaStar 2E AG through center pivot irrigation systems because of non-uniform application. (3) Plug the first nozzle closest to well head to protect water source.
1. Determine the size of the area to be treated.
2. Determine the time required to apply \( \frac{1}{2} \) to 1 inch of water over the area to be treated when the system and injection equipment are operated at normal pressures recommended by the equipment manufacturer. Run the system at 80 to 95% of the manufacturer's rated capacity.
3. Using water, determine the injection pump output when operated at normal line pressure.
4. Determine the amount of MetaStar 2E AG required to treat the area covered by the irrigation system.
5. Add the required amount of MetaStar 2E AG and sufficient water to meet the injection time requirements to the solution tank.
6. Make sure the system is fully charged with water before starting injection of MetaStar 2E AG solution. Time the injection to last at least as long as it takes to bring to system to full pressure.
7. Maintain constant solution tank agitation during the injection period.
8. Continue to operate the system until the MetaStar 2E AG solution has cleared the sprinkler head.
**Solid Set, Hand Move and Moving Wheel Irrigation Equipment**
1. Determine the acreage covered by the sprinklers.
2. Fill injector solution tank with water and adjust flow rate to use the contents over 20 to 30-minute interval.
3. Determine the area to be treated in each irrigation run.
4. Measure the output of each of the emitter or drip tubes closest to and farthest from the injector site.
5. For calibration, substitute a concentrated detergent (such as Wisk) or a soluble fertilizer for the MetaStar 2E AG in the injector tank. The detergent will bubble as it leaves the emitters. The time period over which bubbles occur should be checked for both the closest and farthest emitters. If these times are not within 2 minutes of each other, adjust the dilution ratio and/or the injector rate.
6. If a soluble fertilizer is used, measure the time intervals with a salt bridge. If a drip system is being calibrated, substitute soluble fertilizer for the MetaStar 2E AG in the injector and measure the time intervals with a salt bridge.

**Micro Sprinkler or Drip Irrigation Systems**

**General Instructions**
1. Each run of the irrigation system must be calibrated separately to determine the time it takes water to move through the system and to make sure all emitters in the system are putting out the same amount of water.
2. Only pressure injection or venturi equipment is recommended.
3. Determine the area to be treated in each irrigation run.
4. Measure the output of each of the emitter or drip tubes closest to and farthest from the injector site.
5. For calibration, substitute a concentrated detergent (such as Wisk) or a soluble fertilizer for the MetaStar 2E AG in the injector tank. The detergent will bubble as it leaves the emitters. The time period over which bubbles occur should be checked for both the closest and farthest emitters. If these times are not within 2 minutes of each other, adjust the dilution ratio and/or the injector rate.
6. If a soluble fertilizer is used, measure the time intervals with a salt bridge. If a drip system is being calibrated, substitute soluble fertilizer for the MetaStar 2E AG in the injector and measure the time intervals with a salt bridge.

**Step-by-Step Instructions**
1. Before starting to calibrate, operate the system until all the emitters are putting out at equal flow rates or until the system is operating at full pressure.
2. Make up an indicator solution of detergent or fertilizer, using the same ratio to be used when mixing MetaStar 2E AG.
3. Set the injector to apply the indicator solution at the injection rate to be used in the actual MetaStar 2E AG application.
4. Attach a 5-inch length of flexible tubing over the emitter closest to the injection point, another length over the emitter farthest away. Both emitters should be monitored to determine the time intervals that the indicator solutions are observed.
5. Begin injecting the indicator solution. Direct the flow from the tubes at the emitters into a small container. Begin timing when the indicator solution is first detected, stop timing when the indicator solutions are no longer detected.
6. If the period of detection of the indicator solution between the two emitters are within two minutes of each other, comparable coverage will be obtained. If they are not, make adjustments by increasing the dilution ratio, using more water per part of MetaStar 2E AG, or adjust the injector to a slower flow rate.
7. Once the system is calibrated, dilute the needed amount of MetaStar 2E AG with water using a minimum of 10 parts water to 1 part MetaStar 2E AG. Do not begin to inject MetaStar 2E AG into the system until all emitters are producing equal flow rates, or until the system is at full pressure.
8. Inject the MetaStar 2E AG into the system at the end of the irrigation set in ½ to 1 inch of irrigation water.

---

**APPLES (Bearing and Nonbearing Trees)**

Use of MetaStar 2E AG will aid in the control of crown, collar and root rot caused by Phytophthora spp. when used in conjunction with good cultural practices and rootstocks that are not tolerant to the disease. MetaStar 2E AG applications should be made before symptoms appear, especially in areas of the orchard favorable for disease development. MetaStar 2E AG will not revitalize trees showing moderate to severe disease symptoms.

**Broadcast Spray or Banded Applications:** Apply 2 gals. per treated acre as a broadcast spray (6 fl. oz. per 1,000 sq. ft.) in sufficient water to obtain thorough coverage. The treated area is based on the area under the tree canopy or the area of the sprayed row. Soil surface sprays of MetaStar 2E AG will not be effective until the fungicide is moved into the root zone by rainfall or irrigation. Applications should be made in early spring before growth starts and in the fall after harvest but before the ground freezes.

**Drench:** Mix 1 qt. of MetaStar 2E AG with 100 gals. of water. Apply the amount of diluted mixture indicated in the table below around the trunk of each tree. Applications should be made in early spring before growth starts and in the fall after harvest but before the ground freezes. On new plantings, delay the first application until 2 weeks after planting.

---

**ALFALFA***

MetaStar 2E AG applied to the soil at planting will provide control of damping-off caused by *Pythium* spp. and root rots caused by *Phytophthora* spp.

**Stand Establishment**
Apply 1 to 2 pts. per acre as a broadcast surface spray at planting in a minimum of 20 gals. of water. If inter-seeding alfalfa into existing stands for renovation, apply 1 pt. per acre as a broadcast surface spray at planting in a minimum of 20 gals. of water. If alfalfa seed was previously treated with a metalaxyl or mefenoxam seed treatment product, an application of MetaStar 2E AG at 1 pt. per acre is recommended at planting. Use the higher rate (2 pts. per acre) in areas where disease pressure is expected to be heavy.

**NOTE:** To avoid possible illegal residues, do not feed green forage or cut hay for 60 days following application.
To determine trunk diameter, measure the trunk 12 inches above the soil line.

<table>
<thead>
<tr>
<th>Trunk Diameter</th>
<th>Qts. of Diluted Mixture Per Tree</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 1 inch</td>
<td>1 qt.</td>
</tr>
<tr>
<td>1 to 3 inches</td>
<td>2 qts.</td>
</tr>
<tr>
<td>3 to 5 inches</td>
<td>3 qts.</td>
</tr>
<tr>
<td>&gt; 5 inches</td>
<td>4 qts.</td>
</tr>
</tbody>
</table>

**NOTE:** (1) Do not dip roots of trees in or spray bare roots with solutions containing **MetaStar 2E AG**. (2) Do not graze or feed cover crops in treated orchards, or illegal residues may occur.

**ASPARAGUS**

**MetaStar 2E AG** will control crown rot and spear rot caused by **Phytophthora** spp.  
Apply 2 qts. per acre as a broadcast spray in a minimum or 10 gals. of water over the beds.  
**Cutting Beds:** Apply 30 to 60 days before the first cutting. For additional control, make another application just before the beginning of harvest.  
**New Plantings:** Apply after planting seedlings or after covering one-year old crowns.  
**NOTE:** Do not apply **MetaStar 2E AG** within 1 day of harvest or possible illegal residues may result.

**AVOCADOS**

**Root Rot – ** **Phytophthora cinnamomi**

Begin applications at the start of the growing season or at transplanting. Two additional applications should be made at three-month intervals. Applications are not needed during the winter months of November through February. **MetaStar 2E AG** may be applied as a sleeve drench at the time of transplanting, as a soil surface spray under sprinkler irrigation systems, as a directed spray under drip emitters or injected into the irrigation water.  
**Sleeve Drench:** Mix 1 fl. oz. of **MetaStar 2E AG** with 18 gals. of water. At the time of transplanting, drench the roots inside the sleeve with 1 qt. of **MetaStar 2E AG** solution per tree.  
**NOTE:** The sleeve drench will not replace the soil surface applications for long-term control of root rot.  
**Sprinkler Irrigation:** Apply as a soil surface spray under the canopy of the tree in sufficient water to obtain uniform coverage. See the following table for the amount of **MetaStar 2E AG** to use based on the diameter of the tree canopy. Start applications at the beginning of the growing season or at transplanting and continue at three-month intervals.  
**Drip Irrigation:** Apply the recommended amount of **MetaStar 2E AG** (see table) to the soil directly under the drip emitter at each tree. If there is more than one emitter per tree, distribute the total amount of **MetaStar 2E AG** needed among the emitters.  
**Injection into Irrigation Water (Sprinkler or Drip Irrigation Only):** Inject **MetaStar 2E AG** into the irrigation water at a rate of 2 to 4 fl. oz. per 1,000 gals. (3 ¾ to 7 ¾ ppm active ingredient) at each irrigation. If **MetaStar 2E AG** is not applied at each irrigation, use the table below to determine how much **MetaStar 2E AG** should be injected into the irrigation water. If **MetaStar 2E AG** is to be used more frequently that every 3 months, adjust the rates so that no more than the specified amount is applied during each 3-month period. See the **General Information** section of this label for further instructions and precautions when making applications through irrigation systems.

</tbody>
</table>

**NOTE:** (1) For best results, use **MetaStar 2E AG** as soon as soil tests indicate the presence of Phytophthora. (2) For new plantings, the use of Phytophthora-resistant rot stocks with **MetaStar 2E AG** is recommended. Mature trees in moderate to advanced stages of decline cannot be cured with **MetaStar 2E AG**. (3) Do not apply more than 6 gals. per acre of **MetaStar 2E AG** per year. (4) Do not make an application within 28 days of harvest, or possible illegal residues may result.

**BERRIES**

**Blueberries**

Use of **MetaStar 2E AG** will aid in the control of root rot caused by **Phytophthora** spp. when used in conjunction with good cultural practices to minimize disease problems. **MetaStar 2E AG** will not revitalize plants showing moderate to severe root rot symptoms.  
**Established Plantings:** Apply 1 pt. per 1,000 linear ft. of row (14 ¼ pts. per acre broadcast basis) in a three-foot band over the row before the plants start growth in the spring. One additional application may be made to coincide with periods most favorable for root rot development.  
**New Plantings:** Apply 2 gals. per acre broadcast to the soil at or after the time of planting. One or two additional applications should be made to coincide with periods most favorable for root rot development. For banded applications, an 18-inch band over the row is recommended. Use the formula in the **General Information** section of the label to calculate the amount needed per acre.
NOTE: On new plantings, do not apply more than 3.6 gals. per acre broadcast during the 12 months before bearing harvestable fruit, or possible illegal residues may result.

Cranberries
Use MetaStar 2E AG as a soil application for control of Phytophthora root rot of cranberries caused by Phytophthora spp.
Apply MetaStar 2E AG at 4 to 7 pts. per acre as a broadcast soil application for control of Phytophthora root rot of cranberries. Three applications per crop season are recommended. Make the first application in the fall after harvest. Make the second application in the spring followed by a third application up to but no later than 45 days before harvest.

Apply MetaStar 2E AG using ground or chemigation equipment. Sufficient water should be used to allow movement of MetaStar 2E AG into the root zone. Use a minimum of 20 gals. of water per acre when applying by ground equipment. Refer to the Application Through Irrigation Systems section of the label for instructions and precautions when making applications through irrigation systems.

NOTE: (1) Do not apply MetaStar 2E AG to cranberries by air. (2) To avoid possible illegal residues, do not apply within 45 days before harvest and do not apply more than 21 pts. per acre per growing season.

Raspberries
MetaStar 2E AG is a soil-applied systemic fungicide for use in the control of Phytophthora root rot.

Apply 1 pt. per 1,000 linear ft. or row to the soil surface in a three-foot band over the row. Make 1 application in the spring and another in the fall after harvest. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre.

NOTE: Do not apply MetaStar 2E AG within 45 days before harvest or possible illegal residues may result.

Strawberries
MetaStar 2E AG provides control of red stele (Phytophthora fragariae), vascular collapse (P. cactorum) and leather rot (P. cactorum) when used as directed. Applications may be made using ground application equipment or through drip irrigation systems.

New Plantings: Apply MetaStar 2E AG at 2 qts. per treated acre in sufficient water to move the fungicide into the root zone of the plants. Make one application after transplanting followed by an additional application 30 days before the beginning of harvest or at fruit set. A third application may be made during the harvest season, depending on environmental conditions and disease pressure. For banded applications, use the formula in the General Information section of this label to determine the amount of MetaStar 2E AG needed per acre. When applying MetaStar 2E AG through drip irrigation systems, use the same amount as would be applied in a banded application to cover the root zone of the plants. Observe the precautions concerning application of MetaStar 2E AG through irrigation systems in the General Information section of this label.

Established Plantings: Apply MetaStar 2E AG at 2 qts. per treated acre in sufficient water to move the fungicide into the root zone of the plants. Make one application in the spring after the ground thaws and before first bloom. A second application may be applied after harvest in the fall. For supplemental control of leather rot, an application may be made during the growing season at fruit set. For banded applications, use the formula in the General Information section of this label to determine the amount of MetaStar 2E AG needed per acre. When applying MetaStar 2E AG through drip irrigation systems, use the same amount as would be applied in a banded application to cover the root zone of the plants. Observe the precautions concerning application of MetaStar 2E AG through drip irrigation systems in the General Information section of this label.

NOTE: (1) To avoid possible illegal residues, do not use more than a total of 6 qts. of MetaStar 2E AG per treated acre per year. (2) For low annual rainfall areas, a surface application of MetaStar 2E AG needs to be moved into the root zone by rainfall, overhead irrigation, or mechanical incorporation.

CITRUS
Includes grapefruits, lemons, limes, oranges, tangelos, tangerines, citrus citron, kumquats, satsuma mandarin and hybrids of these.

Use MetaStar 2E AG on citrus for control of citrus foot rot, root rot, and trunk cankers caused by Phytophthora spp. MetaStar 2E AG can be applied as a topical canker application and as a soil application, as a spray or through sprinkler or drip irrigation systems. If trees are on a drip irrigation system, distribute the amount of MetaStar 2E AG needed per tree (see tables) to the soil directly under the drip emitters at each tree. If there is more than one emitter per tree, distribute the total amount of MetaStar 2E AG needed among the emitters.

NOTE: Where nematodes are a problem, best results can be achieved if effective EPA-registered nematicides are used. Nematicides can be used in combination or in sequence with MetaStar 2E AG applications.

Use Precaution: For best Phytophthora control, a combination of cultural practices and resistant varieties is recommended. The use of MetaStar 2E AG is not recommended in Florida for use on the highly susceptible sweet orange rootstock.

Citrus in Nurseries (Arizona, California, Florida and Puerto Rico Only)
Make the first application of MetaStar 2E AG at the time of planting. Make repeat applications at three-month intervals during the period when trees are actively growing. For banded applications, use a band wide enough to cover the root systems of the plants. Do not apply MetaStar 2E AG solutions to bare roots.

Soil Drench: Apply 4 to 6 fl. oz. per 100 gals. of water as a drench over the row at a rate of 100-250 gals. per 1,000 feet of row. The width of the drench treatment should be wide enough to cover the root systems of the plants. Follow with ⅜ to 1 inch irrigation over the treated area.

Soil Surface Spray: Apply 1 to 2 gals. per treated acre in a broadcast or banded surface spray to seedbeds, liners, or bedded stock in sufficient water to obtain thorough coverage. If applications are banded, the treated area should be wide enough to cover the root systems of the plants. Follow applications with a ⅜ to 1 inch irrigation over the treated area.

NOTE: Do not use MetaStar 2E AG for disease control in greenhouse nurseries.
Citrus Resets or New Plantings (Arizona, California, Florida and Puerto Rico Only)
Make the first application of MetaStar 2E AG to citrus resets or new plantings at the time of transplanting. Make up to three additional applications per year at three-month intervals or when root growth flushes occur.

Water Ring Drench: Mix 4 to 6 fl. oz. per 100 gals. of water. Apply 5 gals. of the mix around the base of each tree within the watering ring.

Soil Surface Spray (Arizona and California Only): Apply 1 to 2 gals. per treated acre (3 to 6 fl. oz. per 1,000 sq. ft.) in sufficient water to obtain uniform coverage of the soil surface. Apply spray to the soil surface beneath the tree canopy or apply through irrigation water. If natural rainfall is not expected within three days of a soil surface application, irrigate with ½ to 1 inch water over the treated area. See instructions below for application through irrigation water.

Soil Surface Spray (Florida and Puerto Rico Only): Apply 1 gal. per treated acre (3 fl. oz. per 1,000 sq. ft.) under the canopy of the tree. Applications may be made through low volume irrigation systems at the rate of 1 qt. per grove acre for trees less than 5 years old. Two to three applications per year are recommended. Applications may be made on a spring + summer, summer + fall or spring + summer + fall schedule.

Established Plantings
Soil Application (Florida and Puerto Rico Only): Apply 1/2 gal. per treated acre to groves that have a Phytophthora propagule count of 10 to 20 per cubic centimeter (cc) of soil as a feeder root rot disease maintenance treatment. Applications may be made through low volume irrigation for trees 5 years or older at the rate of 1 qt. per grove acre. Two to three applications per year are recommended. Applications may be made on a spring + summer, summer + fall or spring + summer + fall schedule. For groves with extremely high propagule counts (above 20 per cc of soil), apply 1 gal. per treated acre for one year (2 to 3 applications) to reduce the population.

Soil Surface Spray (Arizona and California Only): For best results, begin MetaStar 2E AG applications during the spring root-flush period. One or two additional applications per year can be made at three-month intervals or to coincide with flushes of root growth. Use the following table to determine the proper rate based on tree size and the number of applications per year. For applications based on broadcast rates, use MetaStar 2E AG at 1 to 2 gals. per acre (3 to 6 fl. oz. per 1,000 sq. ft.) when three applications are planned and at 3 gals. per acre (9 fl. oz. per 1,000 sq. ft.) when two applications are planned. Apply in sufficient water to provide uniform coverage or apply through irrigation water. See instructions below for application through irrigation water.

Trunk Spray for Control of Gummosis Caused by Phytophthora spp. (Arizona, California and Texas Only): Add 1 gal. of MetaStar 2E AG to 3 gallons of water and spray the surface of the trunks using enough spray to thoroughly wet the cankers. In Florida, add 1 gal. of MetaStar 2E AG to 10 gals. of water and spray the surface of the trunks using enough spray to thoroughly wet the cankers. MetaStar 2E AG may be applied up to 3 times per year.

NOTE: (1) To avoid possible illegal residues, do not make trunk and soil applications to the same tree in the same cropping season. (2) Do not apply more than 6 gals. of MetaStar 2E AG per treated acre per year.

Application Through Irrigation Water (Sprinkler or Drip Irrigation Only): See comments and precautions in the General Information section of this label. Inject MetaStar 2E AG into the irrigation water at rates specified in the tables above.

COLE CROPS

[Broccoli, Cabbage, Cauliflower, Chinese broccoli, Gai Lon, White flowering broccoli, and Chinese cabbage (Napa, Bok Choy)]
MetaStar 2E AG applied as a soil application at planting will control damping-off caused by Pythium spp. and basal stem rot caused by Phytophthora spp. Applications may be made preplant incorporated or as a soil surface spray after planting.

Preplant Incorporated Application: Apply 4 to 8 pts. per treated acre as a broadcast soil application in sufficient water or liquid fertilizer to provide uniform coverage and incorporate in the top 2 inches of soil. For control of Pythium damping-off only use 1 to 2 pts. per acre. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre.
Surface Application: Apply 4 to 8 pts. per treated acre at planting in sufficient water or liquid fertilizer to provide uniform coverage. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. If natural rainfall is not expected before the seeds start germinating, MetaStar 2E AG should be incorporated mechanically before planting or be moved into the seed zone after planting with ¼ to ½ inch sprinkler irrigation.

NOTE: (1) Do not use MetaStar 2E AG for disease control in greenhouse crops or field-grown vegetable bedding plants. (2) Do not dip plants in solutions containing MetaStar 2E AG, or crop injury may occur. (3) Do not use MetaStar 2E AG as a transplant water treatment. (4) MetaStar 2E AG may be tank mixed with Terraclor 75WP to control club root (Plasmopara brassicaceae) or wirestem/black root (Corticium solani). Before applying observe all precautions, limitations, rates and directions for use including the need for incorporation on the Terraclor 75WP label.

COTTON

Seed Rots and Seedling Diseases of Cotton Caused by Pythium spp.

Apply ⅛ to ⅜ pt. per 13,000 linear feet of row (0.3 to 0.6 fl. oz. per 1,000 linear ft.) as an-in-furrow spray in 5 to 15 gals. of water or liquid fertilizer at planting. Mount the spray nozzle so the spray is directed into the furrow just before the seeds are covered. For control of Pythium and Rhizoctonia apply 2 to 4 qts. Terraclor 2E or 1 ⅔ to 1 ⅓ lbs. Terraclor 75W per 13,000 linear ft. of row in tank mixture with MetaStar 2E AG.

NOTE: When MetaStar 2E AG is applied with Terraclor 2E or Terraclor 75W, observe all precautions, limitations, rates and directions for use including the need for incorporation on the Terraclor 75WP label.

CUCURBIT VEGETABLES

Includes balsam pear (bitter melon), Chinese waxgourd (Chinese preserving melon), citron melon, cucumber, gherkin, edible gourds, cantaloupe, casaba, crenshaw, honeydew melon, honey balls, mango melon, muskmelon, Persian melon, pumpkin, summer squash, winter squash, watermelon, and cucurbit hybrids only.

MetaStar 2E AG applied at planting will provide control of damping-off and cottony leak caused by Pythium spp. Applications may be made preplant incorporated or as a soil surface spray after planting.

Preplant Incorporated Application: Apply 4 to 8 pts. per treated acre as a broadcast soil application in sufficient water or liquid fertilizer to provide uniform coverage and incorporate in the top 2 inches of soil. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre.

Surface Application: Apply 4 to 8 pts. per treated acre at planting in sufficient water or liquid fertilizer to provide uniform coverage. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. If natural rainfall is not expected before the seeds start germinating, MetaStar 2E AG should be incorporated mechanically before planting or be moved into the seed zone after planting with ¼ to ½ inch sprinkler irrigation.

NOTE: (1) Do not use MetaStar 2E AG for disease control in greenhouse or field-grown vegetable bedding plants. (2) Do not dip plants in solutions containing MetaStar 2E AG, or crop injury may occur. (3) Do not use MetaStar 2E AG as a transplant water treatment.

DECIDUOUS FRUITS AND NUTS IN ORCHARDS (Nonbearing)*

* For bearing Deciduous Fruits & Nuts, see Directions for Use under the Apples and Stone Fruits, Walnuts and Almonds sections of this label.

Phytophthora Diseases

Use of MetaStar 2E AG will aid in the control of crown, collar, and root rot of deciduous fruit and nut trees caused by Phytophthora spp. when used in conjunction with good cultural practices and rootstocks that are most tolerant to the disease. Applications should be made before symptoms appear, especially in areas favorable for disease development. MetaStar 2E AG will not revitalize trees showing moderate to severe disease symptoms. On new plantings, make the first applications at the time of planting (See NOTE below). Additional applications should be made at three-month intervals during the time when conditions are favorable for disease development. For established plantings, make the first application in the spring before growth starts.

Apply 2 gals. per treated acre (6 fl. oz. per 1,000 sq. ft.) in sufficient water to obtain uniform coverage of the soil under the canopy of the trees. For banded applications, use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. Soil surface sprays of MetaStar 2E AG will not be effective until the fungicide is moved into the root zone by rainfall or irrigation.

NOTE: (1) Do not apply to plantings that will bear harvestable fruit within 12 months of the last application, or possible illegal residues may result. (2) To avoid injury, do not use MetaStar 2E AG to dip or spray tree roots. Do not concentrate it around the tree trunks. (3) Do not apply to trees under stress. (4) For intense plantings (2 to 3 times the normal planting rate), make applications on a per area basis, i.e. per acre or 1,000 sq. ft. Do not calculate the amount of MetaStar 2E AG on a per tree basis. (5) In California, do not apply MetaStar 2E AG to newly planted trees within 90 days of planting. (6) Do not apply more than 6 gals. of MetaStar 2E AG per treated acre per year.

GINSENG

MetaStar 2E AG applied to the soil before early growth followed by applications of a metalaxyl or mefenoxam granular product will control Phytophthora root rot in ginseng caused by Phytophthora cactorum.
Apply MetaStar 2E AG at 1 1/2 qts. per acre as a drench in 100 to 400 gallons of water uniformly to the soil surface in the spring before the plants begin growing.

**NOTE:** Do not make any supplemental applications of MetaStar 2E AG.

---

### GRASSES*

* Any grass, Gramineae family (either green or cured), except the following. Do not apply to sugarcane; to any of the following that will be fed or grazed by livestock: barley, buckwheat, corn, millet (pearl or proso), oats, popcorn, rice, rye, sorghum, teosinte, triticale, wheat, or wild rice; or to any enclosed pasture grasses or grasses grown for hay or silage such as bermudagrass, bluegrass, bromegrass, or fescue.

MetaStar 2E AG applied to the soil at planting will provide control of seeding diseases caused by *Pythium* spp.

**For Stand Establishment**

Apply up to 4 pts. per acre as a broadcast surface spray at planting in a minimum of 20 gals. of water. Use 1 to 2 pts. per acre if grass seed was previously treated with a metalaxyl or mefenoxam seed treatment product. Use the higher rate of 2 to 4 pts. per care in areas where there has been a history of Pythium disease.

**NOTE:** To avoid possible illegal residues, (1) do not graze, feed green forage, or cut for hay for 60 days following application. (2) Do not apply to range grasses.

---

### HOPS

MetaStar 2E AG applied as a soil drench followed by foliar applications with Kocide 101 or a comparable copper fungicide registered for use on hops will control downy mildew caused by *Pseudoperonospora humuli*.

**Soil Drench:** Apply 1 qt. of MetaStar 2E AG per acre of hops in a minimum of 20 gals. of water or liquid fertilizer to the soil surface over the crowns after pruning, but before training. Early application before shoots are 6 inches long is preferable.

**Foliar Spray:** When primary infection (spikes) persist after a soil drench treatment and/or there is the first evidence of secondary (foliar) infection, foliar sprays of MetaStar 2E AG in combination with contact copper fungicides may be used. Apply MetaStar 2E AG at 1 qt. per acre in a tank-mix combination with Kocide 101 at 2 lbs. per acre (or an equivalent rate of a comparable copper fungicide registered for use on hops). Apply with ground equipment in a minimum of 50 gals. of water per acre.

**NOTE:** To avoid possible illegal residues, (1) Do not make more than 3 applications of MetaStar 2E AG per season (1 soil drench + 2 foliar sprays) and (2) Do not make the last application within 45 days before harvest; (3) Do not apply foliar sprays of MetaStar 2E AG without a copper fungicide registered for use on hops.

---

### LEAFY VEGETABLES*

* Includes celery, gardengrass, upland cress, endive, fennel, lettuce (head and leafy), parsley, rhubarb, spinach, and Swiss chard.

MetaStar 2E AG applied as a soil application will control damping off caused by *Pythium* spp. in leafy vegetables (*Albugo occidentalis*) and downy mildew in spinach. Applications may be made banded over the row, preplant incorporated, or injected with liquid fertilizer.

**Preplant Incorporated Application:** Apply 4 to 8 pts. per acre at planting in sufficient water or liquid fertilizer to provide uniform coverage and incorporate in the top 2 inches of soil. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre.

**Surface Application:** Apply 4 to 8 pts. per acre at planting in sufficient water or liquid fertilizer to provide uniform coverage. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. If natural rainfall is not expected before the seeds start germinating, MetaStar 2E AG should be incorporated mechanically before planting or be moved into the seed zone after planting with 1/4 inch sprinkler irrigation.

**White Rust and Downy Mildew Control (Spinach Only):** In addition to the preplant incorporated or surface application described above, apply MetaStar 2E AG at 1 pt. per acre of crop, shank in 21 days after planting or after the first cutting. One other application may be shank in after the next cutting. A total of 2 supplemental applications may be used on a 21-day interval. Use sufficient mechanical or bypass agitation to keep the MetaStar 2E AG mixed with the water or fertilizer.

**NOTE:** (1) The additional applications of MetaStar 2E AG noted above and made after each cutting by shanking the fungicide into the beds along with liquid fertilizer provide continuing control of white rust. However, white rust can only be controlled in a preventative disease control program that begins with an application of MetaStar 2E AG to the soil at planting. If MetaStar 2E AG is not used at planting, do not use Metalaxyl at any other time throughout the season. Do not apply MetaStar 2E AG in foliar applications or in situations where white rust infections are already established. The use of MetaStar 2E AG in curative applications greatly increases the risk of the fungus developing insensitivity to metalaxyl. The development of insensitivity will destroy the effectiveness of MetaStar 2E AG in controlling white rust. (2) To avoid possible illegal residues, do not harvest spinach within 21 days of a MetaStar 2E AG application. (3) Do not use MetaStar 2E AG for disease control in greenhouse or field-grown vegetable bedding plants. (4) Do not use MetaStar 2E AG as a transplant water treatment. (5) Do not apply more than 11 pts. of MetaStar 2E AG per acre per growing season in spinach. (6) Do not exceed a total of 2.8 lbs. active ingredient per acre of metalaxyl per growing season when using a combination of MetaStar 2E AG and other metalaxyl products in spinach.
**LEGUME VEGETABLES (Succulent or Dried)**

Includes field beans, French beans, kidney beans, lima beans, mung beans, navy beans, pinto beans, runner beans, snap beans, wax beans, broad beans (fava beans), chickpeas (garbanzo beans), lentils, lupines (sweet, white sweet, white and grain), garden peas, field peas, sugar peas, southern peas (blackeyed peas, crowder peas, cowpeas, caltjarg) and edible soybeans.

**Pythium Damping-Off and Root Rot: MetaStar 2E AG** applied at planting will control damping-off and root rot caused by *Pythium* spp. Applications may be made preplant incorporated, or at a soil surface spray after planting.

**Preplant Incorporated Application:** Apply 2 to 4 pts. per treated acre as a broadcast soil application in sufficient water or liquid fertilizer to provide uniform coverage and incorporate in the top 2 inches of soil. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre.

**Surface Application:** Apply 2 to 4 pts. per treated acre at planting in sufficient water or liquid fertilizer to provide uniform coverage. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. If natural rainfall is not expected before the seeds start germinating, MetaStar 2E AG should be incorporated mechanically before planting or be moved into the seed zone after planting with ½ to 1 inch sprinkler irrigation.

**NOTE:** (1) Do not use MetaStar 2E AG for disease control in greenhouse or field-grown vegetable bedding plants. (2) MetaStar 2E AG may be tank mixed with Terraclor 2E or 75WP to control Rhizoctonia root and stem rot or white mold (*Sclerotinia sclerotiorum*) in snap and dry beans. Observe all precautions, limitations, rates, and directions for use on the respective Terraclor label before applying.

**ONIONS – DRY BULB*, GREEN**, AND ONION GROWN FOR SEED

*Includes garlic, onions (dry bulb), and shallots (dry bulb).

**Includes green onions, leeks, spring onions or scallions, Japanese bunching onions, green shallots, or green eschalots.

**MetaStar 2E AG** applied at planting will control damping-off caused by *Pythium* spp. Applications may be made preplant incorporated or as a soil surface spray after planting.

**Preplant Incorporated Application:** Apply 2 to 4 pts. per treated acre as a broadcast soil application in sufficient water or liquid fertilizer to provide uniform coverage and incorporate in the top two inches of soil. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre.

**Surface Application:** Apply 2 to 4 pts. per treated acre at planting in sufficient water or liquid fertilizer to provide uniform coverage. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. If natural rainfall is not expected before the seeds start germinating, MetaStar 2E AG should be incorporated mechanically before planting or be moved into the seed zone after planting with ½ to 1 inch sprinkler irrigation.

**NOTE:** Do not use MetaStar 2E AG for disease control in greenhouse or field-grown vegetable bedding plants.

**PAPAYA (Hawaii Only)**

MetaStar 2E AG aids in the control of Phytophthora root rot of papaya in new plantings in the field.

**Papaya in the Field – New Plantings:** Make the first application of MetaStar 2E AG at the time of transplanting. Apply 3 ½ to 7 qts. per acre* of soil treated (2 ½ to 5 fl. oz. per 1,000 sq. ft.) as a soil surface spray in sufficient water to obtain thorough coverage of the soil under the canopy of the trees. After application, immediately irrigate with ½ to 1 inch sprinkler irrigation. Repeat in 2 to 4 weeks if conditions are favorable for disease. Use the table below as a guide for treating individual trees.

**NOTE:** To avoid possible illegal residues, (1) Do not apply more than two applications per year in the field to newly transplanted stock, and (2) Do not apply within 3 months of harvest.

* 1 qt. = ½ lb. a.i.

**PEANUTS**

**MetaStar 2E AG** is a soil-applied systemic fungicide for use in control of seedling and pod diseases of peanuts incited by *Pythium* spp.

**Seedling Diseases:** Apply 1 pt. per acre of crop as an application to the seed in-furrow or in a 7-inch band at the time of planting. For the in-furrow applications, position the spray so the fungicide is mixed with the soil covering the seed. Avoid spraying the seed directly with the spray solution or crop injury may occur.

**Pod Rot:** Apply 1 to 2 qts. per acre at early pod set or pegging through overhead irrigation systems. See the General Information section of this label for further instructions and precautions when making applications through irrigation systems.
NOTE: (1) Where pathogens other than *Pythium* spp. are present, use fungicides that control those diseases in combinations with MetaStar 2E AG. (2) Where the predominant pod rot pathogens are *Pythium* spp. and Rhizoctonia spp., use MetaStar 2E AG at 1 to 2 qts. per acre tank mixed with 4 to 8 pts. per acre of Terraclor 2E or PCNB 2E (see product labels).

**PEPPERS AND EGGPLANT**

Soil applications of MetaStar 2E AG will control damping-off caused by *Pythium* spp. and crown rot caused by *Phytophthora capsici*. MetaStar 2E AG must be applied to the soil before the plants are infected with Phytophthora to obtain satisfactory disease control.

Apply 4 to 8 pts. per treated acre at the time of planting in sufficient water (20 to 50 gals.) or liquid fertilizer to provide uniform coverage. For direct seeded peppers, apply preplant or prior to emergence. If rainfall is not expected before the plants begin growth, MetaStar 2E AG should be incorporated mechanically before planting or be moved into the root zone after planting with ½ to 1 inch of sprinkler irrigation water. For banded applications, a 12 to 16 inch band is recommended. After the initial application, two supplemental post-directed applications at 4 pts. per treated acre should be made at 30-day intervals. The spray should be directed at the base of the plants and cover 6 to 8 inches of soil on either side of the plants. Such applications must be incorporated mechanically or by sprinkler irrigation to move the MetaStar 2E AG into the root zone. MetaStar 2E AG may be applied with liquid fertilizer shanked in as a band treatment to either side of the plant. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre.

**Use Precautions:** (1) MetaStar 2E AG may cause some yellowing of the pepper leaves. (2) Plants already infected with Phytophthora cannot be cured with MetaStar 2E AG applications. (3) The foliar blight phase of Phytophthora cannot be controlled with foliar applications of MetaStar 2E AG. (4) In areas where there is a history of late Phytophthora infections, an application of another EPA-registered fungicide labeled for Phytophthora control is recommended 17 to 21 days following the last MetaStar 2E AG application.

**NOTE:** To avoid possible illegal residues, (1) Do not apply within 7 days of harvest, (2) Do not apply more than 12 pts. of MetaStar 2E AG per acre of crop per season, and (3) Do not use MetaStar 2E AG for disease control in greenhouses or field-grown vegetable bedding plants.

**PINEAPPLE**

MetaStar 2E AG applied as a “seed piece” dip, provides effective control of heart rot disease of pineapple caused by *Phytophthora* spp.

Apply MetaStar 2E AG as a crown dip before planting at the rate of 1 to 2 qts. per 100 gals. of water. Use 75 to 100 gals. of dip solution per planted acre, depending on crown size, plant density and dipping techniques.

**NOTE:** If there is a crop failure within one year of planting treated crowns, do not harvest plant material for animal feed.

**ROOT AND TUBER VEGETABLES***

Includes artichoke (Jerusalem), beet (sugar** and table), carrot, cassava, chicory, dasheen (taro), ginger, ginseng***, horseradish, parsnip, potato, radish, rutabaga, salsify, sweet potato, tanier, turnip, and yams.

* See Note at end of section.
** See separate section for Sugar Beets
*** See separate section for Ginseng

MetaStar 2E AG applied to the soil at planting will provide control of diseases caused by *Pythium* and *Phytophthora* spp. Applications may be made preplant incorporated or as a soil surface spray after planting.

**Preplant Incorporated Application:** Apply 4 to 8 pts. per treated acre as a broadcast soil application in sufficient water or liquid fertilizer to provide uniform coverage and incorporate in the top two inches of soil. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per dose.

**Surface Application:** Apply 4 to 8 pts. per treated acre at planting in sufficient water or liquid fertilizer to provide uniform coverage. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. If natural rainfall is not expected before the seeds start germinating, MetaStar 2E AG should be incorporated mechanically before planting or be moved into the seed zone after planting with ½ to 1 inch sprinkler irrigation.

**Potatoes**

MetaStar 2E AG will provide effective control of *Pythium* leak caused by *Pythium* spp., pink rot caused by *Phytophthora erythroseptica*, and *Pythium* seedling caused by *Pythium* spp.

Apply 1.68 oz. of product per 1,000 linear ft. of row on a 6 to 8-inch band at planting in a minimum or 3 gals. of water per acre. Make application directly over the seed piece(s) prior to row closure or use markout method (incorporated).

MetaStar 2E AG may be impregnated on dry fertilizer provided the application rate of 1.68 fl. oz. per linear ft. of row is observed and placement is in a 6 to 8-inch band incorporated within the planted hill. MetaStar 2E AG may also be applied in combination with liquid fertilizers.

**Storage Rots:** MetaStar 2E AG will effectively control storage rots caused by *Pythium* leak and pink rot when used in conjunction with other management practices such as crop rotation. Apply product at 12.8 fl. oz. per acre at flowering and repeat with a second application 14 days later. If the field has a history of storage rot problems, make a third application 14 days after the second application. If conditions favor the development of foliar diseases, use MetaStar 2E AG in tank mixtures with a companion fungicide such as mancozeb, chlorothalonil, or other approved products. When using such tank mixtures, observe all precautions, limitations, rates and directions for use on all product labels. Do not apply this product within 14 days of harvest.
**NOTE:** (1) Do not use MetaStar 2E AG for disease control in greenhouse or field-grown vegetable bedding plants. (2) To avoid development of insensitivity in the pathogen population, do not apply MetaStar 2E AG to potatoes beyond the at-planting growth stage.

---

### SOYBEANS

**MetaStar 2E AG** is a soil-applied systemic fungicide for use in the control of Phytophthora root and stem rot and Pythium damping-off. MetaStar 2E AG may be applied broadcast, banded, or in the seed furrow before the seeds are covered. The seed furrow applications will provide more consistent results if rain is not expected before the seeds germinate.

For best results against Phytophthora root and stem rot, use MetaStar 2E AG with soybean varieties that have some tolerance to the races of Phytophthora present in the field. The higher rate of MetaStar 2E AG should be used in areas with a history of heavy Phytophthora damage. Under heavy late season Phytophthora pressure, MetaStar 2E AG may not provide complete control.

**Surface Application:** For full-season control, apply 1.1 fl. oz. per 1,000 linear feet of row as an in-furrow spray in 5 to 10 gals. of water or liquid fertilizer. Applications may be made preplant incorporated or as a surface spray at planting. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. For early to mid season control, apply 1 to 1.5 fl. oz. per treated acre.

**In-Furrow Applications:** For full-season control, apply 1 to 1.1 fl. oz. for 0.6 fl. oz. per 1,000 sq. ft. Do not calculate the amount of MetaStar 2E AG needed per acre based on row spacing. For early to mid season control, apply 0.3 to 0.6 fl. oz. per 1,000 linear feet of row.

**Suggested Rates Per Acre According to Row Spacing**

<table>

**NOTE:** MetaStar 2E AG is specific for Pythium and Phytophthora and will not control other diseases that may attack soybeans.

---

### STONE FRUITS*, WALNUTS, AND ALMONDS

* Including apricots, cherries (sweet, tart), nectarines, peaches, plums (Chickasaw, Damson, Japanese), and prunes.

Use of MetaStar 2E AG will aid in the control of crown, collar and root rot caused by Phytophthora spp. when used in conjunction with good cultural practices and rootstocks that are most tolerant to the disease. MetaStar 2E AG applications should be made before symptoms appear, especially in areas where disease development is favored. MetaStar 2E AG will not revitalize trees showing moderate to severe disease symptoms.

On new plantings, make the first application of MetaStar 2E AG 2 weeks after planting. Additional applications should be made at 2 to 3-month intervals or during periods most favorable for root, crown, or collar rot development.

For established plantings, the application should be made in the spring before plants start growth. Additional applications should be made at 2 to 3 month intervals or to coincide with periods most favorable for root, crown, or collar rot development.

Apply 2 gals. per treated acre (6 fl. oz. per 1,000 sq. ft.) in sufficient carrier to obtain thorough coverage of the soil under the canopy of the trees. Sufficient surface area should be treated in nurseries to cover the root zone on the plants. Up to 3 applications can be made per year. For banded applications, use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. Soil surface sprays of MetaStar 2E AG will not be effective until the fungicide is moved into the root zone by rainfall or irrigation.

**Use Precautions:** (1) Do not dip the roots of trees in MetaStar 2E AG solutions, spray the roots or concentrate it around the tree trunk or injury may occur. (2) Do not apply it to trees under stress. (3) For intense plantings (2 to 3 times the normal planting rate) make applications on a per area basis, i.e. per acre or 1,000 sq. ft. Do not calculate the amount of MetaStar 2E AG on a per tree basis. (4) In California, do not apply MetaStar 2E AG to newly planted trees within 90 days of planting.

**NOTE:** To avoid possible illegal residues, (1) Do not graze livestock in treated areas, and (2) Do not graze or feed cover crops in treated orchards.

---

### SUGAR BEETS

MetaStar 2E AG will provide control of diseases caused by Pythium spp. Applications may be made preplant incorporated or as a surface spray at planting.

**Preplant Incorporated Application:** Apply 4 to 8 pts. per treated acre as a broadcast soil application in sufficient water or liquid fertilizer and incorporate in the top 2 inches of soil. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre.
Surface Application: Apply 4 to 8 pts. per treated acre at planting in sufficient water or liquid fertilizer to provide uniform coverage. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. If natural rainfall is not expected before the seeds begin germinating, MetaStar 2E AG should be incorporated mechanically before planting or be moved into the seed zone after planting with ½ to 1 inch sprinkler irrigation.

### TOBACCO

MetaStar 2E AG is a soil-applied systemic fungicide for use in the field before transplanting for control of black shank (*Phytophthora parasitica* var *Nicotianae*) and blue mold (*Peronospora tabacina*) on all types of tobacco. For control of anthracnose and other tobacco diseases, use approved fungicides to control those diseases.

**NOTE:** (1) Do not use MetaStar 2E AG for disease control in greenhouse crops or tobacco plant beds. (2) Do not dip plants in solutions containing MetaStar 2E AG, or crop injury may occur. (3) Do not use MetaStar 2E AG for disease control in floathouse, floatbed production facilities, hydroponic production or greenhouse facility. (4) Do not use MetaStar 2E AG as a transplant water treatment. (5) Do not use MetaStar 2E AG as a foliar spray to field planted tobacco.

Field Planted Tobacco

**Blue Mold:** Apply MetaStar 2E AG as a broadcast soil application prior to transplanting and incorporated in the top 2 to 4 inches of soil. For flue-cured tobacco, use 1 to 2 qts. per treated acre, depending on disease pressure and length of control desired. Under low disease pressure or for early season control, use 1 qt. per treated acre. For burley and other tobacco types, use 2 qts. per treated acre.

For **prolonged control** of blue mold in field planted tobacco, make a supplemental application of 1 qt. per acre of crop as a soil application at lay-by or the last cultivation. Position the nozzles so that the spray is deposited under the plants and is covered by soil by the cultivator. Do not make this application if more than 2 qts. per acre of MetaStar 2E AG were applied prior to transplanting or if no MetaStar 2E AG was applied prior to transplanting.

**Black Shank:** Use MetaStar 2E AG as a broadcast soil application prior to transplanting and incorporate in the top 2 to 4 inches of soil. Apply MetaStar 2E AG using conventional ground application equipment in sufficient water or fertilizer to provide uniform coverage. Use the following table to determine the amount of MetaStar 2E AG needed per acre depending on the black shank severity.

<table>
<thead>
<tr>
<th>Type of Tobacco</th>
<th>Disease Level in Field</th>
<th>Rate of MetaStar 2E AG per Acre</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flue-Cured</td>
<td>Low to moderate (less than 6% disease)</td>
<td>2 qts.</td>
</tr>
<tr>
<td></td>
<td>High (more than 6% disease)</td>
<td>4 qts.*</td>
</tr>
<tr>
<td>Burley and Other**</td>
<td>Low to moderate (less than 6% disease)</td>
<td>4 qts.</td>
</tr>
<tr>
<td></td>
<td>High (more than 6% disease)</td>
<td>6 qts.</td>
</tr>
</tbody>
</table>

* Florida and Georgia – Use 6 qts., per treated acre of MetaStar 2E AG in fields with heavy black shank levels (greater than 6%).  
  ** Pennsylvania – Do not use MetaStar 2E AG for black shank control.

For **prolonged control** of black shank in field planted tobacco, one of the following is recommended: (1) Make a preplant incorporated and a supplemental lay-by application (last cultivation). Apply the supplemental application at last cultivation at the rate of 1 to 2 qts. per acre as a soil treatment. Position the nozzles so that the spray is deposited under the plants and is covered with soil by the cultivator. Do not make this application if more than 2 qts per acre of MetaStar 2E AG was applied at transplanting; or (2) Make a preplant incorporated plus 2 supplemental soil applications at first cultivation and last cultivation (lay-by). Apply MetaStar 2E AG at 2 qts. per acre just prior to transplanting followed by a second application of 2 qts per acre at the first cultivation followed by a third application of 2 qts. per acre at lay-by or the last cultivation.

**Resistance Management:** (1) For best results against black shank, use MetaStar 2E AG with tobacco varieties that have high resistance to black shank and use crop rotation. In fields where there is a history of severe black shank incidence, use the highest rate and plant variety that is resistant to the race of Phytophthora present in the field. (Burley L8 hybrids are only resistant to Phytophthora Race O.) (2) MetaStar 2E AG is not recommended for use in high black shank areas on highly susceptible flue-cured varieties. (3) Failure to adequately control nematodes in fields treated with MetaStar 2E AG may result in poor control of black shank.

**No-Till Tobacco:** For black shank and blue mold on all types of tobacco, apply MetaStar 2E AG to the field before transplanting and incorporate in the top 2 to 4 inches of soil. Apply 1 to 2 qts. per treated acre as a preplant, broadcast or banded soil application. For banded applications, use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre. A supplemental lay-by soil application may be made 30 to 35 days after planting at 1 qt. per acre. Do not make the lay-by application if more than 2 qts. per acre of MetaStar 2E AG were applied at transplanting or if no MetaStar 2E AG was applied at transplanting.

### TOMATOES

Soil applications of MetaStar 2E AG at planting will provide control of damping-off caused by *Pythium* spp. Soil applications applied 4 to 12 weeks before harvest under the vines will control fruit and root rot caused by *Pythium* spp. and *Phytophthora* spp.

**Damping-Off (Pythium spp.):** Apply 2 to 4 qts. per treated acre in sufficient water or liquid fertilizer to provide uniform coverage at the time of planting. If rainfall is not expected before the seeds start to germinate, MetaStar 2E AG should be incorporated mechanically before planting, during the planting operation, or be moved into the seed zone after planting with ½ to 1 inch sprinkler irrigation. For banded applications, a 7-inch band is recommended. Use the formula in the General Information section of this label to calculate the amount of MetaStar 2E AG needed per acre.
Root and Fruit Rot (Phytophthora spp. and Pythium spp.): To aid in the control of root and fruit rot, 1 or 2 additional applications may be made during the growing season, depending on the severity of the conditions for disease infection.

Apply 2 qts per treated acre beginning 4 to 6 weeks after planting. A second application may be made as needed up to 4 weeks before harvest, but before the last irrigation. MetaStar 2E AG may be applied as a directed soil surface spray under the vines or it may be injected into the beds with liquid fertilizer. If less than the full bed is treated, use the formula in the General Information section to determine the amount of MetaStar 2E AG needed per acre. If MetaStar 2E AG is injected into the beds with liquid fertilizer, base the calculations on a 7-inch band.

If soil surface sprays are used, the MetaStar 2E AG must be incorporated into the soil with 1⁄2 to 1 inch of rainfall or sprinkler irrigation.

NOTE: (1) To avoid possible illegal residues, do not apply more than 6 qts. per treated acre per season. (2) Keep MetaStar 2E AG suspended in the fertilizer solution with bypass or mechanical agitation. Refer to the General Information section for drip irrigation instructions. (3) Do not use MetaStar 2E AG for disease control in greenhouse or field-grown vegetable bedding plants. (4) Do not use MetaStar 2E AG as a transplant water treatment.

MetaStar 2E AG may be applied with water or liquid fertilizer. Use the test in the General Information section to check for compatibility with various fertilizers.

REPLANTING

If replanting is necessary, additional application of MetaStar 2E AG may be made provided that the total amount of active ingredient in MetaStar 2E AG applied does not exceed the maximum allowed for the specific crop.

ROTATION (PLANTBACK) RESTRICTION

Do not plant any crop which is not registered for use with the MetaStar 2E AG active ingredient in soil treated with this active ingredient for a period of 12 months, unless a shorter interval is specified on the following list.

<table>
<thead>
<tr>

* These crops and other perennial crops may be planted immediately following last application of MetaStar 2E AG, provided they will not bear harvestable fruit within 12 months.

** Any grass, Gramineae family (either green or cured), except the following. Do not apply to sugarcane; to any of the following that will be fed to or grazed by livestock: barley, buckwheat, corn, millet (Pearl or proso), oats, popcorn, rice, rye, sorghum, teosinte, triticale, wheat, or wild rice; or to any enclosed pasture grasses or grasses grown for hay or silage such as bermudagrass, bluegrass, bromegrass, or fescue.

Conditions of Sale and Limitation of Warranty and Liability

The Directions for Use of this product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as manner of use or application, weather or crop conditions, presence of other materials or other influencing factors in the use of the product, which are beyond the control of Arysta LifeScience North America Corporation or Seller. To the extent consistent with applicable law, all such risks shall be assumed by Buyer and User, and Buyer and User agree to hold Arysta LifeScience North America Corporation and Seller harmless for any claims relating to such factors.

Arysta LifeScience North America Corporation warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated in the Directions for Use, subject to the inherent risks referred to above, when used in accordance with directions under normal use conditions. This warranty does not extend to the use of this product contrary to label instructions, or under abnormal conditions or under conditions not reasonably foreseeable to or beyond the control of Seller or Arysta LifeScience North America Corporation and Buyer and User assume the risk of any such use. To the extent permitted by law, Arysta LifeScience North America Corporation MAKES NO WARRANTIES OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE NOR ANY OTHER EXPRESS OR IMPLIED WARRANTY EXCEPT AS STATED ABOVE.

In no event shall Arysta LifeScience North America Corporation or Seller be liable for any incidental, consequential or special damages resulting from the use or handling of this product. TO THE EXTENT PERMITTED BY LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER, AND THE EXCLUSIVE LIABILITY OF Arysta LifeScience North America Corporation AND SELLER FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY, CONTRACT, NEGLIGENCE, TORT, STRICT LIABILITY OR OTHERWISE) RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT OR, AT THE ELECTION OF Arysta LifeScience North America Corporation OR SELLER, THE REPLACEMENT OF THE PRODUCT.
Fungicide

For the control of certain diseases in various crops caused by the Oomycete class of fungi

ACTIVE INGREDIENT:
Metalaxyl: N-(2,6-dimethylphenyl)-N-
(methoxyacetyl) alanine methyl ester .................................. 23.0%

INERT INGREDIENTS: .................................................. 77.0%

TOTAL: ................................................................. 100.0%

Contains 2 lbs. active ingredient per gallon.

KEEP OUT OF REACH OF CHILDREN

WARNING - AVISO

PRECAUCION AL USUARIO: Si usted no lee ingles, no use este producto hasta que la etiqueta haya sido explicado ampliamente.

See additional precautionary statements and directions for use inside booklet.

FIRST AID

IF IN EYES: Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

IF SWALLOWED: Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control center or doctor. Do not give anything by mouth to an unconscious person.

IF ON SKIN OR CLOTHING: Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

IF INHALED: Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

NOTE TO PHYSICIAN: Consideration should be given to gastric lavage with an endotracheal tube in place. A slurry of activated charcoal in water may be left in stomach. Give a saline laxative followed by symptomatic and supportive care.

EMERGENCY TELEPHONE NUMBERS: You may contact:
FOR 24-HOUR EMERGENCY MEDICAL ASSISTANCE: Call PROSAR at 1-866-303-6952.
FOR CHEMICAL EMERGENCY: Spill, leak, fire, exposure, or accident, call CHEMTREC 1-800-424-9300.

For Product Use Information Call: 1-866-761-9397
EPA Reg. No.: 71532-5-66330
EPA Est. No. 51036-GA-001(a) 70898-MO-001(b)
Superscript corresponds to the first letter of the lot number for this package.

Net Contents: 2.5 gallon

PRECAUTIONARY STATEMENTS

Hazards To Humans And Domestic Animals

WARNING/AVISO

Causes substantial but temporary eye injury. Harmful if swallowed, absorbed through the skin or if inhaled. Do not get in eyes or on clothing. Avoid contact with skin. Avoid breathing vapors or spray mist. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum or using tobacco. Remove and wash contaminated clothing before reuse.

Personal Protective Equipment (PPE)

Applicators and other handlers must wear:
• Long-sleeved shirt and long pants.
• Chemical-resistant gloves such as barrier laminate or viton
• Shoes plus socks
• Protective eyewear such as goggles, face shield or safety glasses.

Follow manufacturer’s instructions for cleaning/maintaining PPE. If not such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Engineering Control Statements

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

User Safety Recommendations

Users should:
• Wash hands before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

Environmental Hazards

Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Apply only as specified on this label. Do not apply when weather conditions favor drift from treated areas. Do not contaminate water when disposing of equipment washwaters or rinsate.

Groundwater Advisory Statement

This chemical is known to leach through soil into ground water under certain conditions as a result of agricultural use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in ground water contamination.

Physical or Chemical Hazards

Do not use or store near heat or open flame.

PESTICIDE STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited.

Pesticide Storage: Store water at temperatures above 40°F. Crystals may form at lower storage temperatures. If this occurs, place the product in a warm room (68°F or above) and roll or shake the container at frequent intervals until all crystals are dissolved.

For minor spills, leaks, etc. follow all precautions indicated on this label and clean-up immediately. Take special care to avoid contamination of equipment and facilities during clean-up procedures and disposal of wastes.

Pesticide Disposal: Wastes resulting from the use of this product are toxic. Improper disposal of unused pesticide spray mixture, or rinsate is a violation of Federal law. Pesticide, spray mixture or rinsate that cannot be used according to label instructions must be disposed of according to Federal, State or local procedures. For guidance in proper disposal methods, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional office.

Container Disposal: Do not reuse empty container. Triple rinse (or equivalent) and offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

Returns/Refillable Containers: Do not refill container. Do not empty remaining formulated product. Do not break seals. Return intact to point of purchase.
