PRODUCT INFORMATION

Organic BioLink Phosphorus Fertilizer is a mined fertilizer for correction of phosphorus deficiency in organic food production.

Organic BioLink Phosphorus Fertilizer is an essential nutrient required by plants that is primarily responsible for a vigorous root development and fruit and flower production. This product is ideal for use during periods of rapid growth in which plants require large amounts of phosphorus.

Organic BioLink Phosphorus Fertilizer also contains 20% calcium for correction of calcium deficiency.

DIRECTIONS FOR USE

Apply as a soil drench, drip irrigation, chemigation or as a foliar spray. Acidify spray mix to a pH of 6.0 with BioLink Acidifier to increase availability.

Organic BioLink Phosphorus Fertilizer can be applied to all crops including fruit trees, vines, tree nuts, fruits and vegetables, field and row crops, ornamental trees, shrubs and flowers, containerized plants, and turf. Apply as a soil drench or a foliar spray.

Foliar Application: Apply 5 to 10 pounds per 30 to 200 gallons of water; keep agitation going in the tank. Add 1 quart of BioLink Acidifier per each 5 pounds of Organic BioLink Phosphorus Fertilizer in the concentrated mix.

Soil application: Apply 10 to 200 pounds per acre through all application equipment, including chemigation. Apply as needed, based on soil and tissue testing.

For Chemigation Systems: Prepare a concentrated mix prior to injection by mixing Organic BioLink Phosphorus Fertilizer with enough water so that the solution is flowable. Do not use more than 40 pounds of Organic BioLink Phosphorus Fertilizer per 100 gallons of water in the concentrated mix. Add 1 quart of BioLink Acidifier per each 5 pounds of Organic BioLink Phosphorus Fertilizer in the concentrated mix. Maintain constant agitation during mixing and injection.

WARNING: Perform a phytotoxicity test on a small plot before large-scale application. To lower the risk of phytotoxicity, applications should be made early morning or late evening.
