Tebuconazole 3.6F
Foliar Fungicide

TURF AND ORNAMENTAL USES*
*Not for use in California

ACTIVE INGREDIENT: % BY WT.
Tebuconazole: alpha-[2-(4-chlorophenyl)ethyl]-alpha-(1,1-dimethylethyl)-1H-1,2,4-triazole-1-ethanol ...................... 38.7%

OTHER INGREDIENTS: ........................................ 61.3%
TOTAL: .................................................. 100.0%
Contains 3.6 pounds tebuconazole per gallon

EPA Reg. No. 66222-117 EPA Est. No. 37429-GA-001BT; 37429-GA-002BO
Letter(s) in lot number correspond(s) to superscript in EPA Est. No.

KEEP OUT OF REACH OF CHILDREN
CAUTION

For additional precautionary, handling, and use statements, see inside of this booklet.

Manufactured for: Makhteshim Agan of North America, Inc.
4515 Falls of Neuse Road, Suite 300 • Raleigh, NC 27609

Net Contents: 1 Gallon
**PRECAUTIONARY STATEMENTS**

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

**CAUTION**

Harmful if swallowed or absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes, and clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Remove and wash contaminated clothing before reuse.

**PERSONAL PROTECTIVE EQUIPMENT (PPE)**

Some materials that are chemical resistant to this product are listed below. If you want more options, follow the instructions for category C on an EPA chemical resistance category selection chart.

**Applicators and other handlers must wear:**

- Long-sleeved shirt and long pants
- Chemical-resistant gloves such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, polyvinyl chloride, or Viton
- Shoes plus socks

---

**FIRST AID**

| IF SWALLOWED:                  | • Call a poison control center or doctor immediately for treatment advice.  
|                               | • Have person sip a glass of water if able to swallow.  
|                               | • Do not induce vomiting unless told to do so by a poison control center or doctor.  
|                               | • Do not give anything by mouth to an unconscious person.  
| IF ON SKIN OR CLOTHING:       | • Take off contaminated clothing.  
|                               | • Rinse skin immediately with plenty of water for 15 to 20 minutes.  
| IF IN EYES:                   | • Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.  
|                               | • Remove contact lenses, if present, after the first 5 minutes; then continue rinsing eye.  
|                               | • Call a poison control center or doctor for treatment advice.  
| IF INHALED:                   | • Move person to fresh air.  
|                               | • If person is not breathing, call 911 or an ambulance; then give artificial respiration, preferably mouth-to-mouth if possible.  
|                               | • Call a poison control center or doctor for further treatment advice.  

Have the product container or label with you when calling a poison control center or doctor or going for treatment. For medical emergencies, call Prostar 24 hours a day at 1-877-250-9291.

**NOTE TO PHYSICIAN:** No specific antidote. Treat symptomatically.

**Symptoms of Poisoning:** The compound does not cause any definite symptoms that would be diagnostic. Contact with the eyes may cause irritation.
Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENTS

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

USER SAFETY RECOMMENDATIONS

Users should:
• Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet.
• Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to mammals, fish, and aquatic invertebrates. Do not apply directly to water to areas where surface water is present, or to intertidal areas below the mean high water mark. Runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Ground Water Advisory: Tebuconazole is known to leach through soil into ground under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Surface Water Label Advisory: This product may contaminate water through drift of spray in wind. This product has a high potential for runoff for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to runoff that contains this product. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted within 48 hours.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.
Spray Volume: For turf, apply Quali-Pro Tebuconazole 3.6F in 66-132 gallons of water per acre by ground sprayer. For ornamentals other than leatherleaf fern, use 50-300 gallons of finished spray per acre depending upon equipment, plant species, and plant growth stage at the time of application. For leatherleaf fern, apply Quali-Pro Tebuconazole 3.6F in a minimum of 5 gallons of finished spray per acre using ground equipment or chemigation. Check equipment calibration frequently. Complete coverage and uniform application are essential for the most effective results, especially when lower spray volumes are applied. If necessary, increase the spray volume per acre for complete crop coverage.

Chemigation: Apply Quali-Pro Tebuconazole 3.6F through irrigation equipment only to leatherleaf fern in Florida to suppress anthracnose. Apply this product only through center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, or hand move; or drip (trickle) irrigation systems. Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water. Contact State Extension Service specialists, equipment manufacturers, or other experts if you have questions regarding calibration. Do not connect irrigation systems (including
greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments if the need arises.

Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, back flow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the flow outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection.

The system must contain a functional check valve, vacuum-relief valve, and low-pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a metering pump such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not apply when wind speed favors drift beyond the area intended for treatment.

Maintain continuous agitation in mix tank during mixing and application to assure a uniform suspension. Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. Pesticide may be applied continuously for the duration of the water application.

**Mixing:** Add labeled amount of Quali-Pro Tebuconazole 3.6F into the spray tank while filling with water to the desired level. Operate the agitator while mixing. If other materials are added to the spray tank, the Quali-Pro Tebuconazole 3.6F should be thoroughly dispersed prior to the addition of other materials.

Do not tank mix with products containing a prohibition against tank mixing. Follow the most restrictive labeling requirements of any tank mix product.
**Compatibility:** To determine the compatibility of Quali-Pro Tebuconazole 3.6F with other products, use the following procedure: Pour the labeled proportions of the products into a suitable container of water, mix thoroughly, and allow to stand at least five (5) minutes. If the combination remains mixed or can be remixed readily, the mixture is considered physically compatible. For further information, contact your local Makhteshim Agan representative.

**Resistance Management Statement**
Quali-Pro Tebuconazole 3.6F is a Group 3 fungicide which exhibits no known cross-resistance to other fungicide groups. However, fungal pathogens are known to develop resistance to products with the same mode of action when used repeatedly. Any fungal population may contain or develop individuals that are resistant to Quali-Pro Tebuconazole 3.6F and other Group 3 fungicides. If Group 3 fungicides are used repeatedly in the same field or in successive years as the primary method of control for targeted diseases, the resistance isolates may eventually dominate the fungal population. Because resistance development cannot be predicted, the use of this product should conform to resistance management strategies established for the crop and use area. Such strategies may include rotation and/or tank mixing with products having different modes of action or limiting the total number of applications per season. Contact your local extension specialist, certified crop advisor, and/or manufacturer for fungicide resistance management and/or integrated disease management recommendations for specific crops and resistant disease populations. Makhteshim Agan of North America, Inc. encourages responsible management to ensure effective long-term control of the fungal disease on this label.

**TURF AND ORNAMENTAL USES**

**DISEASE CONTROL IN GOLF COURSE TURF**

**PRODUCT INFORMATION**
For use on all golf turf applications of cool-season and warm-season grasses (such as Bentgrasses, Bluegrasses, Fescues, Ryegrasses, St. Augustine grasses, and Zoysia) or their mixtures. Quali-Pro Tebuconazole 3.6F is not phytotoxic to any of the above-mentioned grasses when used in accordance with the label. **Note:** Bermudagrass can be sensitive to Quali-Pro Tebuconazole 3.6F under certain conditions. Do not apply consecutive applications during or just after dormancy break. Avoid applications when temperatures are expected to exceed 85°F.

Quali-Pro Tebuconazole 3.6F can be used for the prevention and control of the diseases mentioned in table below. Begin applications when conditions favor disease development and repeat applications as long as these conditions persist. Preventative treatments can be applied using 28-day intervals as indicated. When treating golf greens, always treat aprons and approaches. Spray uniformly over the area to be treated with properly calibrated equipment. Apply the specified amount of Quali-Pro Tebuconazole 3.6F Fungicide in sufficient water for thorough coverage. A volume of 66 – 132 gallons per acre (1.5 – 3.0 gallons per 1000 sq ft) is recommended. Apply using properly calibrated low-volume, hand-held, mechanical, or motorized ground broadcast equipment. Application to small areas may be made with low-pressure handwand or backpack equipment.
Depending on the disease, Quali-Pro Tebuconazole 3.6F should be watered into the crown and active root zone for best results. Make all applications after mowing and allow foliage to dry thoroughly before irrigation. For best results, use spray mixture the same day it is prepared.

**USE RESTRICTIONS AND PRECAUTIONS**
- For use on golf course turf only.
- Do not use on home lawns and turf sites associated with apartment buildings, daycare centers, playgrounds, playfields, recreational park athletic fields, athletic fields located on or next to schools (i.e., elementary, middle, and high school), campgrounds, churches, and theme parks.
- Not for homeowner use.
- Not for use on turf being grown for sale or commercial use as sod.
- Do not use clippings for animal feed.
- Do not exceed 3.6 oz of Quali-Pro Tebuconazole 3.6F Fungicide per 1000 sq ft per year.
- Do not apply more than 6 applications per year.

</tbody>
</table>

See COMMENTS at end of table.
**PRODUCT INFORMATION:** For use on ornamental plants only; not for woodlands or forest management. Not for homeowner use.

Quali-Pro Tebuconazole 3.6F can be used in a preventative and curative disease control program for the listed plant types and diseases in the table below. Optimum disease management is obtained when Quali-Pro Tebuconazole 3.6F is used in conjunction with sound disease management practices.

Apply material with properly calibrated hand-held, mechanical, or motorized spray equipment. Begin applications when disease first appears and repeat at 14- to 21-day intervals during the growing season. Use the shortest interval when conditions are unusually favorable for the development of disease. For hand-held, mechanical, or motorized applications, mix as directed below and apply as a full coverage spray to drip for the prevention and control of the diseases listed below. Choose a finished spray volume appropriate for the size of the plants and amount of foliage, which will provide thorough coverage throughout the canopy. Allow sprays to dry before overhead irrigation is applied.

**USE RESTRICTIONS AND PRECAUTIONS**

- Apply Quali-Pro Tebuconazole 3.6F at rates of 4-10 fl oz per acre in 100 gallons of water. Spray volume may range from 50 up to 300 gallons of finished spray per acre depending upon equip-

**COMMENTS:** Apply the specified amount of Quali-Pro Tebuconazole 3.6F in 1.5 to 3.0 gallons of water per 1000 sq ft. Make all applications after mowing and allow foliage to dry thoroughly before irrigation. Do not use clippings for animal feed. Do not exceed 3.6 fl oz of Quali-Pro Tebuconazole 3.6F per 1000 sq ft per year. Do not exceed 6 applications per year.
ment, plant species, and plant growth stage at time of application.

- Do not apply more than 30 fl oz per acre in a single application.
- Do not apply more than 0.94 gallons (120 fl oz) of Quali-Pro Tebuconazole 3.6F (equal to 3.38 lbs of tebuconazole) per acre per year.
- Do not make more than 4 applications per year at highest rate.
- Do not apply to bearing fruit trees or vegetables.

**NOTE:** The **DIRECTIONS FOR USE** section of this product label reflects the cumulative inputs from both historical field use and product testing programs. However, it is impossible to test this product on all species and cultivars. A preliminary trial is suggested on a small scale before a full treatment is applied to any plant type not shown on this label but found in a similar use site with a listed disease problem. Wait 5-7 days after treatment to evaluate results. This product is not recommended for use on African Violets, Begonias, Boston Fern, and Geraniums.

For small plantings, add 1 teaspoon of Quali-Pro Tebuconazole 3.6F to 2.5 gallons of water.
Pump-Style Sprayers

1. Add the appropriate amounts of concentrate and water to the sprayer tank.
2. Close the sprayer, shake well, and pressurize.
3. Adjust nozzle to a coarse spray pattern and apply.
4. Occasionally repressurize the sprayer, if needed, to maintain a good spray pattern.

**OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, AND ESTUARIES.**
- Apply only during alternate years in fields adjacent to aquatic areas listed above.
- Do not apply by ground or air within 100 feet of aquatic areas listed above.
- Do not cultivate within 10 feet of an aquatic area to allow growth of a vegetative filter strip.

**Spray Drift Management:** For aerial applications, mount the spray boom on the aircraft so as to minimize drift caused by wing tip vortices. Use the minimum practical boom length and do not exceed 75% of the wing span or rotor diameter. Use the largest droplet size consistent with pest control. Formation of very small droplets may be minimized by appropriate nozzle selection, by orienting nozzles away from the airstream as much as possible, and by avoiding excessive spray boom pressure. Apply in a minimum of 5 gallons of spray solution per acre by aircraft spray equipment. Release the spray at the lowest possible height consistent with good pest control and flight safety. Avoid applications more than 10 feet above the crop canopy. Make aerial or ground appli-

<tbody>
<tr>
<td>LEATHERLEAF FERN (FLORIDA ONLY)</td>
<td>Anthracnose (suppression)</td>
<td>5 to 10 fl oz per acre</td>
</tr>
</tbody>
</table>

**Notes:** Make the first application before anthracnose symptoms are present and continue at 12- to 14-day intervals.

**USE RESTRICTIONS:**
A maximum of 5 pints of Quali-Pro Tebuconazole 3.6F may be applied per acre per year.

**Comments:** Apply Quali-Pro Tebuconazole 3.6F in a minimum of 5 gallons of spray solution per acre using ground equipment or chemigation.

**USE LIMITATIONS:**
Quali-Pro Tebuconazole 3.6F can cause phytotoxicity to Leatherleaf Fern under certain environmental conditions. Applications in temperatures less than 70°F can cause phytotoxicity in the form of leaf burning and/or yellowing. Application followed by temperatures falling below 55°F can cause similar symptoms.

Before using this product on Leatherleaf Fern, read the LIMITATION OF WARRANTY AND LIABILITY section in its entirety.
cations when wind velocity favors on-target product deposition (approximately 3 to 10 mph). Do not apply when wind velocity exceeds 15 mph. Avoid applications when wind gusts approach 15 mph. Risk of exposure to sensitive aquatic areas can be reduced by avoiding applications when wind direction is toward the aquatic area. Low humidity and high temperatures increase the evaporation rate of spray droplets and therefore the likelihood of spray drift to aquatic areas. Avoid spraying during conditions of low humidity and/or high temperature. Do not make aerial or ground applications during temperature inversions. Inversions are characterized by stable air and increasing temperatures with height above the ground. Mist or fog may indicate the presence of an inversion in humid areas. The applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

**STORAGE AND DISPOSAL**

Do not contaminate water, food, or feed by storage or disposal.

**PESTICIDE STORAGE:** Store in a cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food, and feed. Store in original container and out of the reach of children, preferably in a locked storage area. Handle and open container in a manner as to prevent spillage. If container is leaking, invert to prevent leakage. If the container is leaking or material is spilled for any reason or cause, carefully dam up spilled material to prevent runoff. Refer to **PRECAUTIONARY STATEMENTS** on label for hazards associated with the handling of this material. Do not walk through spilled material. Absorb spilled material with absorbing-type compounds and dispose of as directed for pesticides below. In spill or leak incidents, keep unauthorized people away.

**PESTICIDE DISPOSAL:** Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility.

**CONTAINER HANDLING:**

**Nonrefillable Container (five gallons or less):** Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

**LIMITATION OF WARRANTY AND LIABILITY**

Read the entire directions for use, conditions of warranties and limitations of liability before using this product. If terms are not acceptable, return the unopened product container at once. By using this product, user or buyer accepts the following **CONDITIONS, DISCLAIMER OF WARRANTIES** and **LIMITATIONS OF LIABILITY**.

**CONDITIONS:** The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this prod-
Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Makhteshim Agan of North America, Inc. All such risks shall be assumed by the user or buyer.

**DISCLAIMER OF WARRANTIES:** To the extent consistent with applicable law, Makhteshim Agan of North America, Inc. makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond the statements made on this label. No agent of Makhteshim Agan of North America, Inc. is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. To the extent consistent with applicable law, Makhteshim Agan of North America, Inc. disclaims any liability whatsoever for special, incidental or consequential damages resulting from the use or handling of this product.

**LIMITATIONS OF LIABILITY:** To the extent consistent with applicable law, the exclusive remedy of the user or buyer for any and all losses, injuries or damages resulting from the use or handling of this product, whether in contract, warranty, tort, negligence, strict liability or otherwise, shall not exceed the purchase price paid or at Makhteshim Agan of North America, Inc.’s election, the replacement of product.

To the extent consistent with applicable law, MANA accepts no responsibility and shall not be liable for phytotoxicity or side effects of Quali-Pro Tebuconazole 3.6F used on Leatherleaf ferns under any conditions.

Quali-Pro is a registered trademark of Makhteshim Agan of North America, Inc.
Quali-Pro Tebuconazole 3.6F
Foliar Fungicide
Contains tebuconazole, the active ingredient used in Folicur 3.6F.
Quali-Pro Tebuconazole 3.6F is not manufactured or distributed by Bayer CropScience.

ACTIVE INGREDIENT: % BY WT.
Tebuconazole, alpha-[2-(4-chlorophenyl)ethyl]-alpha-(1,1-dimethylethyl)-1H-1,2,4-triazole-1-ethanol ........ 38.7%

INERT INGREDIENTS: ................................................................. 61.3%
Total: 100.0%

Contains 3.6 pounds tebuconazole per gallon

KEEP OUT OF REACH OF CHILDREN
CAUTION
Manufactured for:
Makhteshim Agan of North America, Inc.
4515 Falls of Neuse Rd., Suite 300
Raleigh, NC  27609

EPA Reg. No. 66222-117
EPA Est. No. 37429-GA-001

NET CONTENTS: 2.5 GALLONS

FIRST AID
IF SWALLOWED: • Call a poison control center or doctor immediately for treatment advice.
• Have person sip a glass of water if able to swallow.
• Do not induce vomiting unless told to do so by a poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

IF ON SKIN OR CLOTHING: • Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15 to 20 minutes.
• Call a poison control center or doctor for treatment advice.

IF IN EYES: • Hold eye open and rinse slowly and gently with water for 15 to 20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.
• Call a poison control center or doctor for treatment advice.

IF INHALED: • Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible.
• Call a poison control center or doctor for further treatment advice.

Have the product container or label with you when calling a poison control center or doctor or going for treatment. For medical emergencies, call Prosar 24 hours a day at 1-877-250-9291.

NOTE TO PHYSICIAN: No specific antidote. Treat symptomatically.
Symptoms of Poisoning: The compound does not cause any definite symptoms that would be diagnostic. Contact with the eyes may cause irritation.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS
CAUTION
Harmful if swallowed or absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes, and clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)
Some materials that are chemical resistant to this product are listed below. If you want more options, follow the instructions for category C on an EPA chemical resistance category selection chart.
Applicators and other handlers must wear:
• Long-sleeved shirt and long pants
• Chemical-resistant gloves such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, polyvinyl chloride, or Viton
• Shoes plus socks

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS STATEMENTS
When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.
USER SAFETY RECOMMENDATIONS

Users should:
- Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to mammals, fish, and aquatic invertebrates. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Ground Water Advisory: Tebuconazole is known to leach through soil into ground under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination.

Surface Water Label Advisory: This product may contaminate water through drift of spray in wind. This product has a high potential for runoff for several months or more after application. Poorly draining soils and soils with shallow water tables are more prone to runoff that contains this product. A level, well maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential for contamination of water from rainfall runoff. Runoff of this product will be reduced by avoiding applications when rainfall is forecasted within 48 hours.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours for all crops except sweet corn and lychee. For sweet corn, the REI is 19 days. For lychee, the REI is 2 days.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water, is:
- Coveralls
- Chemical-resistant gloves such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, polyvinyl chloride, or Vlton
- Shoes plus socks

Spray Volume: Quali-Pro Tebuconazole 3.6F may be applied in a minimum of 10 gallons of spray solution per acre by ground sprayer or in a minimum of 5 gallons of spray solution per acre by aircraft spray equipment. Check equipment calibration frequently. Complete coverage and uniform application are essential for the most effective results, especially when lower spray volumes are applied. If necessary, increase the spray volume per acre for complete crop coverage.

Chemigation: Do not apply this product through any type of irrigation system.

Mixing: Add labeled amount of Quali-Pro Tebuconazole 3.6F into the spray tank while filling with water to the desired level. Operate the agitator while mixing. If other materials are added to the spray tank, the Quali-Pro Tebuconazole 3.6F should be thoroughly dispersed prior to the addition of other materials.

Do not tank mix with products containing a prohibition against tank mixing. Follow the most restrictive labeling requirements of any tank mix product.

Compatibility: To determine the compatibility of Quali-Pro Tebuconazole 3.6F with other products, the following procedure should be followed: Pour the labeled proportions of the products into a suitable container of water, mix thoroughly and allow to stand at least five (5) minutes. If the combination remains mixed or can be remixed readily, the mixture is considered physically compatible. For further information contact your local Makhteshim Agan representative.

APPLICATION INSTRUCTIONS

<table>
<thead>
<tr>
<th>CROP</th>

<th>RATE OF QUALI-PRO TEBUCONAZOLE 3.6 F</th>
</tr>
</thead>
<tbody>
<tr>
<td>ASPARAGUS</td>
<td>Rusts (Puccinia spp.)</td>
<td>4 to 6 fl oz per acre</td>
</tr>
</tbody>
</table>

Notes: Apply Quali-Pro Tebuconazole 3.6F as a foliar spray to the developing ferns after harvest of spears is completed. Apply at the earliest sign of rust pustules or when weather conditions are conducive for rust development. Apply 4 to 6 fl oz of Quali-Pro Tebuconazole 3.6F per acre (0.11 lb ai – 0.17 lb ai per acre) in alternation with another effective fungicide. Under conditions of severe rust pressure, use the higher rate. Repeat applications on a 14-day interval as necessary to maintain control of rust. Do not apply to harvestable spears. Do not apply within 100 days of harvest in California and 180 days in all other states. Do not make more than three foliar applications per season (18 fl oz/acre or 0.51 lb ai/acre).

General Comments: Applications may be made using ground or aerial application equipment. A 50 foot spray drift buffer zone is required for all aerial applications. For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F is a sterol demethylation inhibitor (DMI) fungicide (Group 3). Alternating Quali-Pro Tebuconazole 3.6F with other DMI fungicides may lead to resistance.

Restricted-entry interval (REI) = 12 hours.
### General Comments:
For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, Quali-Pro Tebuconazole 3.6F will be resistant to weathering. Quali-Pro Tebuconazole 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).

**Application timing directions:**
Rusts: Apply Quali-Pro Tebuconazole 3.6F at the earliest sign of rust pustules on foliage. Fusarium head blight: Optimal timing of Quali-Pro Tebuconazole 3.6F for Fusarium head blight suppression is when main stem heads have fully emerged (Feekes 10.5) on 50% of the plants.

Repeat applications at 7- to 14-day intervals, or as necessary to maintain control. A maximum of 24 fl. oz. (1.5 pint) of Quali-Pro Tebuconazole 3.6F may be applied per acre per crop season. Sweet corn: Quali-Pro Tebuconazole 3.6F may be applied up to 7 days before the harvest of ears or forage, and 49 days before the harvest of fodder. Field, seed, or popcorn: Quali-Pro Tebuconazole 3.6F may be applied up to 21 days before the harvest of forage, and 36 days before the harvest of grain or fodder. |  |
| COTTON | Southwestern cotton rust (Puccinia cacabata) | 6 to 8 fl oz per acre |
| | Notes: Apply Quali-Pro Tebuconazole 3.6F in a protective spray schedule or when weather conditions are favorable for rust development. Repeat applications at 7- to 14-day intervals, or as necessary to maintain control. Quali-Pro Tebuconazole 3.6F may be applied up to 30 days before harvest. Do not apply more than 24 fl. oz. of Quali-Pro Tebuconazole 3.6F per acre per crop season. |  |
| General Comments: For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F must have two to four hours of drying time on cotton foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, Quali-Pro Tebuconazole 3.6F will be resistant to weathering. Quali-Pro Tebuconazole 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).  
Restricted-entry interval (REI) = 12 hours. |  |
## CROP

### CUCURBIT VEGETABLES GROUP
- Chayote
- Chinese waxgourd
- Citron melon
- Cucumber
- Gherkin
- Edible gourd, (includes hyotan, cucuzza, hechima and Chinese okra)
- Momordica spp. (includes balsam apple, balsam pear, bitter melon and Chinese cucumber)
- Musk melon (includes cantaloupe, casaba, crenshaw melon, golden pershaw melon, honeydew melon, honey balls, mango melon, Persian melon, pineapple melon, Santa Claus melon and snake melon)
- Pumpkin
- Summer squash (includes crookneck squash, scallop squash, straightneck squash, vegetable marrow and zucchini)
- Winter squash (includes butternut squash, calabaza, Hubbard squash, acorn squash and spaghetti squash)
- Watermelon

### DISEASE
- Powdery mildew (Sphaerotheca fuliginea / Podosphaera xanthii)
- Gummy stem blight - suppression (Didymella bryoniae) (watermelon, squash, pumpkin, and melons only)

### RATE OF QUALI-PRO TEBUCONAZOLE 3.6 F
- 4 to 6 fl oz per acre
- 8 fl oz per acre

### Notes:
- Apply the specified dosage in a protective spray schedule to foliage and fruit. Repeat applications at 10- to 14-day intervals. Quali-Pro Tebuconazole 3.6F may be applied up to 7 days before harvest. Do not apply more than 24 fl oz. of Quali-Pro Tebuconazole 3.6F per acre per crop season.

## General Comments:
- For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F must have two to four hours of drying time for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, Quali-Pro Tebuconazole 3.6F will be resistant to weathering. Quali-Pro Tebuconazole 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).
- Restricted-entry interval (REI) = 12 hours.

## DRY BULB ONION
### GARLIC
### GREAT-HEADED (ELEPHANT)
### GARLIC
### WELCH ONION
### SHALLOT

### DISEASE
- White rot (Sclerotium cepivorum)
- Rust (Puccinia allii, Puccinia porri)
- Purple blotch (Alternaria porii)

### RATE OF QUALI-PRO TEBUCONAZOLE 3.6 F
- White rot: 20.5 fl oz per acre applied in a 4 to 6 inch band over/into each furrow.
- Rust: May be applied by chemigation to control white rot.
- Purple blotch at 4 to 6 fl oz per acre

### Notes:
- Do not apply more than 32.5 fl oz. Quali-Pro Tebuconazole 3.6 F per acre per season as a foliar spray. Do not apply within 7 days of harvest (PHI = 7 days).

## General Comments:
- For optimum results use as a preventative treatment. Begin applications as soon as crop and/or environmental conditions become favorable for disease development. The lowest labeled rate of a spray surfactant may be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F must have two to four hours of drying time on foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, Quali-Pro Tebuconazole 3.6F will be resistant to weathering. Quali-Pro Tebuconazole 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).
- Restricted-entry interval (REI) = 12 hours.

## GREEN ONION, LEEK, SPRING ONION, SCALLION, JAPANESE BUNCHING ONION, GREEN SHALLOTS AND GREEN ESCHALOTS

### DISEASE
- White rot caused by Sclerotium cepivorum suppression only
- Rust (Puccinia allii, Puccinia porri)
- Purple blotch (Alternaria porii)

### RATE OF QUALI-PRO TEBUCONAZOLE 3.6 F
- 4 to 6 fl oz per acre

### Notes:
- For the control of diseases make foliar applications using an interval of 10 to 14 days. Apply Quali-Pro Tebuconazole 3.6F in a protective spray schedule or when weather conditions are favorable for rust development.
- Do not apply more than 24 fl oz of Quali-Pro Tebuconazole 3.6F per acre per season. Do not apply within 7 days of harvest (PHI = 7 days).

## General Comments:
- For optimum results use as a preventative treatment. Begin applications as soon as crop and/or environmental conditions become favorable for disease development. The lowest labeled rate of a spray surfactant may be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F must have two to four hours of drying time on foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, Quali-Pro Tebuconazole 3.6F will be resistant to weathering. Quali-Pro Tebuconazole 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).
- Restricted entry interval (REI) is 12 hours.

**Notes:** Apply specific dosage of Quali-Pro Tebuconazole 3.6F in a preventative spray program. Use the highest rate when disease conditions are favorable and in areas where high disease pressure is expected. Applications may be repeated at 14-day intervals in order to maintain control of the disease. Apply specified dosage as a foliar spray in a minimum of 20 gallons of spray solution per acre by ground or a minimum of 5 gallons of spray solution by air. Applications may be made no closer than 3 days before harvest. Do not apply more than 24 fl. oz. of Quali-Pro Tebuconazole 3.6F per acre per season.

**General Comments:** For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, Quali-Pro Tebuconazole 3.6F will be resistant to weathering. Quali-Pro Tebuconazole 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) = 12 hours.

**APPLICATION SPRAY PROGRAM:** Apply the specified rate in a preventative spray schedule. See table below for proper timing of applications. Applications of chlorothalonil should be made prior to and following applications of Quali-Pro Tebuconazole 3.6F to discourage development of resistant strains of fungi. For optimum control of foliar diseases such as leaf rust, web blotch, and pepper spot, the lowest label labeled rate of a spray surfactant should be tank-mixed with Quali-Pro Tebuconazole 3.6F.

**LEAF SPOT ADVISORY SCHEDULE:** For control of soilborne diseases in an advisory schedule, apply Quali-Pro Tebuconazole 3.6F in the first advisory spray in July and continue Quali-Pro Tebuconazole 3.6F applications at 14-day intervals. Applications after August 15 should be tank mixed with chlorothalonil for resistance management purposes.

**GENERAL DIRECTIONS:** For optimum control of the specified soilborne diseases, four consecutive applications of Quali-Pro Tebuconazole 3.6F must be made at 14-day intervals.

A maximum of 28.8 fluid ounces of Quali-Pro Tebuconazole 3.6F may be applied per crop season. Quali-Pro Tebuconazole 3.6F may be applied up to 14 days before harvest. Do not feed hay or threshings or allow livestock to graze in treated areas.

Quali-Pro Tebuconazole 3.6F is a sterol demethylation inhibitor (DMI) fungicide. Chlorothalonil may be tank mixed at the rate of 12 ounces of active ingredient with Quali-Pro Tebuconazole 3.6F as a leaf spot resistance management strategy. A spray surfactant is not necessary when Quali-Pro Tebuconazole 3.6F is tank mixed with chlorothalonil. Mixing or alternating Quali-Pro Tebuconazole 3.6F with other DMI fungicides may lead to resistance.

Quali-Pro Tebuconazole 3.6F must be carried by rainfall or irrigation into the root and pod zone for control of root and pod rots caused by *Sclerotium rolfsii* and *Rhizoctonia solani*. Drought conditions will decrease the effectiveness of Quali-Pro Tebuconazole 3.6F against the root and pod rots. Use Quali-Pro Tebuconazole 3.6F in conjunction with cultural practices that are known to reduce the severity of soilborne diseases, such as proper crop rotation practices.

**FOUR-APPLICATION SPRAY PROGRAM:** For optimum control of the specified soilborne diseases, four consecutive applications of Quali-Pro Tebuconazole 3.6F must be made at 14-day intervals.

Page 6 of 8
**Notes:** Apply Quali-Pro Tebuconazole 3.6F in a preventive spray schedule beginning at early bud break (young leaves unfolding), and continue applications at 10- to 14-day intervals through the pollination period. Quali-Pro Tebuconazole 3.6F should be applied at 4 fl. oz. per acre in a tank-mix with the labeled rate of Super-Tin® in cover sprays. Follow label directions for the use of Super-Tin. Do not add a surfactant to the spray solution when tank-mixing Quali-Pro Tebuconazole 3.6F with Super-Tin. Apply Quali-Pro Tebuconazole 3.6F in a spray volume of 15 or more gallons per acre by air or 50 or more gallons per acre by ground. Apply 7 to 8 fl. oz. per acre of Quali-Pro Tebuconazole 3.6F to full-size mature trees, and 4 to 6 fl. oz. per acre of Quali-Pro Tebuconazole 3.6F to smaller trees. Apply the high rate to varieties that are highly susceptible to the indicated diseases, or when severe disease conditions exist. The lowest labeled rate of a surfactant may be added to the spray solution for optimum control of the indicated diseases. Do not apply after shocks begin to split. A maximum of 32 fl. oz. of Quali-Pro Tebuconazole 3.6F may be applied per acre per crop season. Do not cut cover crops in treated areas for feed or allow livestock to graze treated areas.

**PECAN (continued): General Comments:** For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, Quali-Pro Tebuconazole 3.6F will be resistant to weathering. Quali-Pro Tebuconazole 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). It may be applied in a tank-mix or alternated (every other spray application) with a non-DMI fungicide as a resistance management strategy. Restricted-entry interval (REI) = 12 hours.

<tbody>
<tr>
<td>Rust (Phakopsora pachyrhizi)</td>
<td>Powdery mildew (Microsphaera diffusa)</td>
<td>3 to 4 fl oz per acre</td>
</tr>
</tbody>
</table>

**Use Directions:** Apply Quali-Pro Tebuconazole 3.6F as a broadcast foliar spray as a preventative spray or at first visible symptoms of disease. Repeat applications on a 10- to 14-day spray interval if environmental conditions are favorable for continued disease development. Use of the higher rates and shorter spray intervals are labeled when disease pressure is severe. The lowest label labeled rate of a spray surfactant must be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F should be applied in a minimum for 10 gallons of spray solution per acre by ground sprayer or in a minimum of 5 gallons per acre by aircraft spray equipment.

**Restrictions:** Applications may not be made within 21 days of harvest. Do not apply more than 3 applications per season. Do not apply more than 12 fl. oz/a per use season. Restricted-entry interval (REI) = 12 hours.

**SUNFLOWER**

</tr>
</thead>
<tbody>
<tr>
<td>Rust (Puccinia helianthi)</td>
<td>4 to 6 fl oz per acre</td>
<td></td>
</tr>
</tbody>
</table>

**Notes:** Apply specific dosage of Quali-Pro Tebuconazole 3.6F at the earliest sign of infection (rust pustules developing) or when weather conditions are favorable for rust development. Apply higher rate to highly susceptible varieties and/or under severe disease conditions. Application may be repeated at 14 days if necessary to maintain control of the disease. Apply specified dosage in a minimum of 20 gallons of spray solution per acre by ground or a minimum of 5 gallons of spray solution by air. Do not apply more than 16 fl. oz. of Quali-Pro Tebuconazole 3.6F F per acre per season or within 50 days of harvest.

**General Comments:** For optimum disease control, the lowest labeled rate of a spray surfactant should be tank-mixed with Quali-Pro Tebuconazole 3.6F. Contact your state Extension Service or Bayer representative for a list of approved surfactants. Quali-Pro Tebuconazole 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, Quali-Pro Tebuconazole 3.6F will be resistant to weathering. Quali-Pro Tebuconazole 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3). Restricted-entry interval (REI) = 12 hours.

</thead>
<tbody>
<tr>
<td>Rusts leaf, stem, and stripe (Puccinia spp.)</td>
<td>Head blight or scab (Fusarium spp.) – Suppression</td>
<td>4 fl oz per acre</td>
</tr>
</tbody>
</table>

**Notes:** Wheat fields should be observed closely for early disease symptoms, particularly when susceptible varieties are planted and/or under prolonged conditions favorable for disease development. A maximum of 4 fl. oz. of Quali-Pro Tebuconazole 3.6F may be applied per acre per crop season. Do not apply within 30 days of harvest. Straw may be fed or used for bedding. Do not allow livestock to graze or feed green forage to livestock prior to 6 days after treatment with Quali-Pro Tebuconazole 3.6F. Apply Quali-Pro Tebuconazole 3.6F in a minimum of 10 gallons of spray solution per acre by ground, or in a minimum of 5 gallons of spray solution per acre by air.

**Application timing directions:**

- Rusts: Apply Quali-Pro Tebuconazole 3.6 F at the earliest sign of rust pustules on foliage.
- Fusarium head blight: Optimal timing of Quali-Pro Tebuconazole 3.6F for Fusarium head blight suppression is the beginning of flowering on main stem heads (Feekes 10.51).

**General Comments:** For optimum disease control, the lowest specified rate of a spray surfactant should be tank-mixed with Quali-Pro Tebuconazole 3.6F. Quali-Pro Tebuconazole 3.6F must have two to four hours of drying time on plant foliage for the active ingredient to move systemically into plant tissue before rain or irrigation occurs. After this period of time, Quali-Pro Tebuconazole 3.6F will be resistant to weathering. Quali-Pro Tebuconazole 3.6F is a demethylation inhibitor (DMI) fungicide (Group 3).
SEED TREATMENT: Corn (Sweet Corn, Field Corn, Field Corn Grown For Seed, and Popcorn)
For control of soilborne and seedborne Fusarium and soilborne and seedborne head smut.

SEED LABELING: To meet U.S. Federal Seed Act requirements, all seed treated with Quali-Pro Tebuconazole 3.6F must be labeled:

TREATED SEED, DO NOT USE FOR FOOD, FEED, OR OIL PURPOSES. Treat with Tebuconazole.

USE PRECAUTION: When using formulations that do not contain dye, to comply with 40 CFR 153.155, all seed treated with an economic poison must be colored to distinguish and prevent subsequent inadvertent use as a food for man or feed for animals.

OBSERVE THE FOLLOWING PRECAUTIONS WHEN SPRAYING IN THE VICINITY OF AQUATIC AREAS SUCH AS LAKES, RESERVOIRS, RIVERS, PERMANENT STREAMS, MARSHES OR NATURAL PONDS, AND ESTUARIES.

Apply only during alternate years in fields adjacent to aquatic areas listed above.
Do not apply by ground or air within 100 feet of aquatic areas listed above.
Do not cultivate within 10 feet of an aquatic area to allow growth of a vegetative filter strip.
Spray Drift Management: For aerial applications, the spray boom should be mounted on the aircraft so as to minimize drift caused by wing tip vortices. The minimum practical boom length should be used, and must not exceed 75% of the wing span or rotor diameter. Use the largest droplet size consistent with pest control. Formation of very small droplets may be minimized by appropriate nozzle selection, by orienting nozzles away from the air stream as much as possible and by avoiding excessive spray boom pressure. Apply in a minimum of 5 gallons of spray solution per acre by aircraft spray equipment. Sprays should be released at the lowest possible height consistent with good pest control and flight safety. Applications more than 10 feet above the crop canopy should be avoided.
Make aerial or ground applications when wind velocity favors on-target product deposition (approximately 3 to 10 mph). Do not apply when wind velocity exceeds 15 mph. Avoid applications when wind gusts approach 15 mph.
Risk of exposure to sensitive aquatic areas can be reduced by avoiding applications when wind direction is toward the aquatic area. Low humidity and high temperatures increase the evaporation rate of spray droplets and therefore the likelihood of spray drift to aquatic areas. Avoid spraying during conditions of low humidity and/or high temperature.
Do not make aerial or ground applications during temperature inversions. Inversions are characterized by stable air and increasing temperatures with height above the ground. Mist or fog may indicate the presence of an inversion in humid areas. The applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

ROTATIONAL CROPS
Treated areas may be replanted with any crop specified on this label as soon as practical after last application. Any crop not specified on this label may be planted into treated areas 120 days after last application.

STORAGE AND DISPOSAL

Do not contaminate water, feed or food by storage or disposal.
PESTICIDE STORAGE: Store in a cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food, and feed. Store in original container and out of the reach of children, preferably in a locked storage area.
Handle and open container in a manner as to prevent spillage. If container is leaking invert to prevent leakage. If the container is leaking or material is not acceptable, return the product and dispose of as directed for pesticides below.
PESTICIDE DISPOSAL: Waste resulting from the use of this product may not be disposed of on site or at an approved waste disposal facility.
CONTAINER DISPOSAL:
Nonrefillable Container (five gallons or less): Nonrefillable container. Do not reuse or refill this container. Offer for recycling, if available. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times.

LIMITATION OF WARRANTY AND LIABILITY

Read the entire directions for use, conditions of warranties and limitations of liability before using this product. If terms are not acceptable, return the unopened product container at once.
By using this product, user or buyer accepts the following CONDITIONS, DISCLAIMER OF WARRANTIES and LIMITATIONS OF LIABILITY.
CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Makhteshim Agan of North America, Inc. All such risks shall be assumed by the user or buyer.
DISCLAIMER OF WARRANTIES: To the extent consistent with applicable law, Makhteshim Agan of North America, Inc. makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond the statements made on this label. No agent of Makhteshim Agan of North America, Inc. is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein.
LIMITATIONS OF LIABILITY: To the extent consistent with applicable law, the exclusive remedy of the user or buyer for any and all losses, injuries or damages resulting from the use or handling of this product, whether in contract, warranty, tort, negligence, strict liability or otherwise, shall not exceed the purchase price paid or at Makhteshim Agan of North America, Inc.’s election, the replacement of product.
