ROW CROPS (Cotton, Soybeans, Peanuts, Field Corn, Popcorn, Sugar Beets, Table Beets, Tomatoes, Peppers, Cucumbers, Mels, Squash): To improve growth and yield, apply at the rate of 5 to 10 lbs. per acre early in the season to improve growth and yield. One to five applications are desirable depending on the crop and the season. FORAGE AND HAY CROPS (Alfalfa, Clover, and Grasses, Such as Orchard Grass and Timothy): To stimulate growth and improve plant vigor apply TRACITE® FOLIAR 20-20-20 as a foliar spray at the rate of 5 to 10 lbs. per acre. Applications can be made at 7 to 10 day intervals depending on the amount of growth desired. SEED CROPS (Alfalfa, Cowpeas, Carrots, Lettuce, and Asparagus): To improve crop growth and yield, apply at the rate of 5 to 10 lbs. per acre just prior to head formation. To further stimulate yield 1 or 2 earlier applications are desirable. Apply at 7 to 10 day intervals. HOPS AND MINT: Use at the rate of 5 to 10 lbs. per acre starting early in the season to improve growth and yield. One to five applications are desirable, depending on the season. TOBACCO: Transplanting: Add 1 Ib. to each 100 gallons of water. See your local county agent or extension service personnel for further information. Beds: Add 5 lbs. to 100 gallons of water and water beds in usual manner or apply 5 lbs. in dry form to 100 sq. yds. and apply sufficient water to immediately saturate the area. Frequency of application depends upon amount of color and growth desired. Fields: When supplemental fertilization is needed especially during periods of dryness, apply 5 lbs. from heavy rainfall, apply TRACITE® FOLIAR 20-20-20 as a foliar spray at the rate of 5 to 10 lbs. per acre at 10 to 14 day intervals. Frequency of application depends upon amount of color and growth desired. TOMATOES, PEPPERS, CUCUMBERS, MELONS, AND SQUASH: Use at the rate of 5 to 10 lbs. per acre. First application should be made when the plants are 3 to 4 weeks old. Repeat at 7 to 10 days intervals. Applications per season for best result are: 4. POTATOES: Use at the rate of 5 to 10 lbs. per acre. For new potatoes, 5 lbs. per 100 gallons of water at time of transplanting. For most tree crops, 3 to 5 lbs. to 100 gallons of water at time of transplanting. For use as a foliar, nutritional spray, apply at the rate of 5 to 10 lbs. per acre when the plants have been established for approximately 3 to 6 applications per season at 7 to 10 day intervals, depending on weather conditions and crop vigor. CARROTS, PARSNIPS, AND ASPARAGUS: Foliage efficiency uses high concentration of nutrients between the 15th and 18th day of growth. Use 5 lbs. of TRACITE® FOLIAR 20-20-20 at 10 day intervals. Apply 5 to 7 applications per season for best results. The precise time of application depends on prevailing weather conditions and amount of growth desired. BEANS, PEAS, SWEET CORN, LENTILS, AND ONIONS: Use at the rate of 7 to 10 lbs. per acre when the plants are 3 to 4 weeks old. Repeat application at 7 to 10 day intervals as needed, particularly through the 30-day tuber-setting period. CELERY, LETTUCE, ENDIVE, BROCCOLI, CARROTS, CAULIFLOWER, BRUSSELS SPROUTS, KALE, AND SPINACH: Use 5 lbs. per 100 gallons of water at time of transplanting or 10 to 15 lbs. of TRACITE® FOLIAR 20-20-20 per acre (Except for Tobacco, see below). FOLIAR SPRAYAPPLIED TO FOLIAGE EFFICIENTLY USES HIGH CONCENTRATION OF NUTRIENTS BETWEEN THE 15TH AND 18TH DAY OF GROWTH. USE 5 LBS. PER 100 GALLONS OF WATER AT TIME OF TRANSPLANTING. FOR USE AS A FOLIAR, NUTRITIONAL SPRAY, APPLY AT THE RATE OF 5 TO 10 LBS. PER ACRE WHEN THE PLANTS HAVE BEEN ESTABLISHED FOR APPROXIMATELY 3 TO 6 APPLICATIONS PER SEASON AT 7 TO 10 DAY INTERVALS, DEPENDING ON WEATHER CONDITIONS AND CROP VIGOR.
